### HAEMATOLOGY

	results	unit	reference
--	---------	------	-----------

#### ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate)	<b>38</b>	mm/1hr	00 - 20
--------------------------------------	-----------	--------	---------

##### Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

#### BLOOD SUGAR F, Sodium Fluoride Pla

Blood Sugar (F)	<b>111.2</b>	mg/dl	70 - 110
-----------------	--------------	-------	----------

##### Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions.

High levels of serum glucose may be seen in case of Diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents.

Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

Triglyceride	165.2	mg/dl	00 - 170
Cholesterol/HDL RATIO	3.3	%	3.30 - 4.40

#### INTERPRETATION:

Lipid profile or lipid panel is a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides. The results of this test can identify certain genetic diseases and can determine approximate risks for cardiovascular disease, certain forms of pancreatitis, and other diseases.

#### Comment:-

Kidneys play an important role in the removal of waste products and maintenance of water and electrolyte balance in the body. Kidney Function Test (KFT) includes a group of blood tests to determine how well the kidneys are working.

**Comments:**

Human red blood cell antigens can be divided into four groups A, B, AB AND O depending on the presence or absence of the corresponding antigens on the red blood cells. There are two glycoprotein A and B on the cell's surface that are responsible for the ABO types. Blood group is further classified as RH positive and RH negative.

Hb A1C, GLYCOSYLATED Hb ,EDTA HPLC	5.80	%	
Average Glucose Calculated	119.76	mg/dL	<125.0

**Interpretation:**

AS PER AMERICAN DIABETES ASSOCIATION (ADA)

REFERENCE GROUP	HbA1c IN %
NON DIABETIC	< 6.0 %
GOOD CONTROL	6 - 7 %
FAIR CONTROL	7 - 8 %
ACTION SUGGESTED	FOR MORE THAN 8 %

Result done on : Tosoh Automated Glycohemoglobin Analyzer.

**Comment :**

Glycosylated Hb is a normal adult Hb which is covalently bounded to a glucose molecule. Glycosylated Hb concentration is dependent on the average blood glucose concentration and is stable for the life of the RBC (120 days). Glycohaemoglobin serves as suitable marker of metabolic control of diabetics. Its estimation is unaffected by diet, insulin, exercise on day of testing and thus reflects average blood glucose levels over a period of last several weeks /months. There is a 3 - 4 week time before percent Glycohaemoglobin reflects changes in blood glucose levels.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

1. Glycosylated hemoglobin (HbA1c) test is three monthly monitoring done to assess compliance with therapeutic regimen in diabetic patients.
2. Since Hb1c reflects long term fluctuations in blood glucose concentration, a diabetic patient who has recently under good control may still have high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.

3.Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targetting a goal of < 7.0% may not be appropriate.			
4.High HbA1c (>9.0 -9.5 %) is strongly associated with risk of development and rapid progression of microvascular and nerve complications			
5.Any condition that shorten RBC life span like acute blood loss, hemolytic anemia falsely lower HbA1c results.			
6.HbA1c results from patients with HbSS,HbSC and HbD must be interpreted with caution , given the pathological processes including anemia,increased red cell turnover, and transfusion requirement that adversely impact HbA1c as a marker of long-term glycemc control.			
7.Specimens from patients with polycythemia or post-splenctomy may exhibit increase in HbA1c values due to a somewhat longer life span of the red cells.

## Ultrasound Report

NAME: Mrs. VINITA

AGE: 37yrs

DATE: 27/10/2022

### Real time USG of abdomen and pelvis reveals –

**LIVER**--Liver appears normal in size and shape, contour and echopattern. There is no evidence of any focal lesion seen in the parenchyma. Intra-hepatic vascular and biliary radicles appear normal. Portal vein and common bile duct are normal.

**GALL BLADDER**- Gall bladder is physiologically distended. The wall thickness is normal. There is no Evidence of any intraluminal mass lesion or calculi seen.

**PANCREAS**-Pancreas is normal in size, shape and echo pattern. No focal mass lesion seen. Pancreatic duct is not dilated.

**SPLEEN**-Spleen show normal size, shape and homogeneous echopattern. No focal mass lesion is seen in parenchyma.

**KIDNEY** -Both the kidneys are normal in size, shape, position and axis. Parenchymal echopattern is normal bilaterally. No focal solid or cystic lesion is seen. There is no evidence of renal calculi on Rt side. **Left kidney shows renal calculus meas. 3mm in mid pole.**

**RETROPERITONIUM**- -There is no evidence of ascites or Para – aortic adenopathy seen. Retroperitoneal structures appear normal.

**URINARY BLADDER**- Adequately distended, Walls were regular and thin. Contents are normal. No stone formation seen.

**UTERUS**-Uterus and both ovaries are normal in size, shape and echopattern, No focal lesion is seen. Endometrial appears. There is no evidence of free fluid seen in the pelvis. There is no evidence of adnexal mass is seen.

**IMPRESSION: Left Renal Calculus.**
