COMMENTS :-

An ESR does not specifically diagnose any diseases, but it can provide information about whether or not there is inflammation in your body.

If your results are not in the normal range, it doesn't necessarily mean you have a medical condition that requires treatment. A moderate ESR may indicate pregnancy, menstruation, or anemia, rather than an inflammatory disease. Certain medicines and supplements can also affect your results. These include birth control, contraceptives, aspirin, cortisone, and vitamin A. Be sure to tell your health care provider about any drugs or supplements you are taking.

(METHOD : DONE BY AUTOMETED ESR ANYLAZER)
