DEPARTMENT OF CLINICAL BIOCHEMISTRY

TEST NAME	RESULTS	UNITS	BIO.REFERENCE INTERVAL
Glycosylated Hemoglobin (HbA1c):			
Glycosylated Hemoglobin (HbA1c):	5.4	%	< 6.0% : Non Diabetic 6.0 - 7.0% : Good Control 7.0 - 8.0% : Average Control 8.0 - 9.0% : Poor Control >9.0% : Very poor control

Mean Blood Glucose **108.3** mg/dL

INTERPRETATION: HbA1c is an indicator of glycemic control. HbA1c represents average glycemia over the past six to eight weeks. Glycation of hemoglobin occurs over the entire 120 day life span of the red blood cell, but with in this 120 days. Recent glycemia has the largest influence on the HbA1c value. Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months two to four.

Mean Plasma Glucose mg/dl = $(\text{HbA1c} \times 28.7) - 46.7$ Correlation between HbA1c and Mean Plasma Glucose (MPG) is not "perfect" but rather only this means that to predict or estimate average glucose from Hb-A1c or vice-versa is not "perfect" but gives a good working ballpark estimate. Afternoon and evening results correlate more closely to HbA1c than morning results, perhaps because morning fasting glucose levels vary much more than daytime glucose levels which are easier to predict and control.

As per IFCC recommendations 2007, HbA1c being reported as above maintaining traceability to both IFCC (mmol/mol) & NGSP (%) units..

Sri: Reports

Dear Sir, I am patton Muni with EC no 1959TT
working in BOB and I came for Annual Health check up on
17-3-23 to your clinic.

I have some pending checks like (2. diabetes, ultrasound
optical consultation, pap smear) which I don't want to go through
these checks right now because of lack of time.

So kindly handover my Reports whatever I have consulted

Thanking you,
Yours faithfully,
P. Muni.
