Test Asked: Lipid Profile (LP)

(Biochemistry done by Semi Auto Analyzer.)

## LIPID PROFILE

Tests	Result	Unit	Method	Limitations
Total Lipids	512.45	mg/dl	Calculated	450 - 1000
Total Cholesterol	182.29	mg/dl	CHOD-PAP	130 - 250
<small>Cholesterol is the main lipid found in blood, bile and brain tissues. It is the main lipid associated with atherosclerotic vascular diseases. It is required for the formation of steroids and cellular membranes. The liver synthesizes the cholesterol and it is transported in the blood stream by lipoproteins. Increased levels are found in hypercholesterolemia, hyperlipidemia, nephrotic syndrome, uncontrolled diabetes and cirrhosis. Decreased levels are found in malabsorption, emaciation, hyperthyroidism, trauma and liver diseases.</small>				
Triglycerides	95.65	mg/dl	GPO	60 - 150 (M) 40 - 130 (F)
<small>Triglycerides are lipid composed by those absorbed from diet and those endogenously produced from carbohydrates. Their measurement is important for the diagnosis and control of hyperlipidemia. These diseases may have genetic origin or be secondary to others such as nephrotic, diabetes mellitus and endocrine dysfunction. Increase of triglycerides has been identified as a risk factor for atherosclerotic diseases.</small>				
HDL Cholesterol	30.25	mg/dl	PTA	30 - 70 (M) 35 - 90 (F)
<small>Cholesterol from liver is transported to various tissue cells by low density lipoproteins, very low density lipoproteins and chylomicrons through blood plasma circulation. It is also synthesized by the cells as needed. The excess cholesterol is transported back to liver by high density lipoproteins (HDL). High density lipoproteins, therefore, are indicators of level where it is either converted to the bile acids or is excreted in bile. Elevated levels of HDL cholesterol suggest a balanced state of cholesterol metabolism in tissue. Lower than normal levels of high density lipoprotein cholesterol are associated with higher risks of atherosclerosis i.e. Depression of cholesterol in cells of blood vessels and contributes like hyperlipidemia, coronary heart disease (CHD) related to it.</small>				
LDL Cholesterol	56.68	mg/dl	Calculated	70 - 150
VLDL Cholesterol	29.34	mg/dl	Calculated	5.0 - 30
Total Chol/HDL	2.90	-----	Calculated	0.00 - 4.90
LDL/HDL	0.86	-----	Calculated	0.00 - 3.55

### CHD RISK FACTOR
