Hi **Aditya Diagnostics And Research Laboratories,**Diagnostic/Hospital Location :**G-1,MIG 256-258,RD NO 4,CANRA BANK, City:Hyderabad**

We have received the confirmation for the following booking .

Beneficiary Name : PKG10000248**Beneficiary Name** : MR. BHISE PURUSHOTTAM D**Member Age** : 34**Member Gender** : Male**Member Relation** : Employee**Package Name** : Mediwheel Metro Full Body Health Checkup Male Below 40**Location** : PETHUMRI,Maharashtra-431807**Contact Details** : 9766449087**Booking Date** : 15-03-2022**Appointment Date** : 26-03-2022**Instructions to undergo Health Check:**

1. Please ensure you are on complete fasting for 10-To-12-Hours prior to check.
2. During fasting time do not take any kind of medication, alcohol, cigarettes, tobacco or any other liquids (except Water) in the morning.
3. Bring urine sample in a container if possible (containers are available at the Health Check centre).
4. Please bring all your medical prescriptions and previous health medical records with you.
5. Kindly inform the health check reception in case if you have a history of diabetes and cardiac problems.

For Women:

1. Pregnant Women or those suspecting are advised not to undergo any X-Ray test.
2. It is advisable not to undergo any Health Check during menstrual cycle.

We request you to facilitate the employee on priority.

Investigation	Result	Reference Range
% HbA1c (Glycosylated Haemoglobin) (Method: HPLC-NGSP Certified)	5.4 %	< 6.0 : Pre Diabetic 6-7 : Good Control 7-8 : Weak Control > 8.0 : Poor Control

Intpretation :

HbA1c is an indicator of glycemic control. HbA1c represents average glycemia over the past six to eight weeks. Glycation of hemoglobin occurs over the entire 120 day life span of the red blood cell, but with in this 120 days. Recent glycemia has the largest influence on the HbA1c value. Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months two to four.

Mean Plasma Glucose mg/dl = (HbA1c x 35.6) - 77.3)

Correlation between HbA1c and Mean Plasma Glucose (MPG) is not "perfect" but rather only .81 (1.0 would be a straight line, which has "perfect" correlation...) This means that to predict or estimate average glucose from Hb-A1c or vice-versa is not "perfect" but gives a good working ballpark estimate. Afternoon and evening results correlate more closely to HbA1c than morning results, perhaps because morning fasting glucose levels vary much more than daytime glucose levels, which are easier to predict and control.

<u>Investigation</u>	<u>Result</u>	<u>Normal Ranges</u>
Triiodothyronine Total (TT3)	1.15 ng/mL	0.60 - 1.81 ng/mL
Thyroxine - Total (TT4)	9.53 mg/dL	3.5 - 12.6 mg/dL
Thyroid Stimulating Hormone(TSH) Method: C.L.I.A	4.55 μ IU/ml	0.35 - 5.50 μ IU/ml

Interpretation

Primary malfunction of the thyroid gland may result in excessive (hyper) or below normal (hypo) release of T3 or T4. In addition, as thyroid function is directly affected by TSH. Diagnostically, T3 concentration is more sensitive to certain thyroid conditions than T4. While T4 levels are a sensitive (and superior) indicator of hypothyroidism, T3 blood levels better define hyperthyroidism. Because T3 concentration in serum changes faster and more markedly than T4, the T3 level is also an excellent indicator of the ability of the thyroid to respond to both stimulatory and suppressive tests. Under conditions of strong thyroid stimulation, the T3 level offers a good.

It is especially useful in the differential diagnosis of primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

Ultrasound Scan Abdomen

- Liver** Slightly Increased in Size (162 mm) with Increased Echotexture.
Shape, contour normal. No localized or diffused mass lesions are seen.
Intrahepatic vascular system, Portal vein, C.B.D and biliary radicals are normal.
- Gall Bladder** Partially distended. Wall thickness are normal. No calculus.
No mass lesions are seen.
- Spleen** Size : 109 mm, Shape and echotexture normal, No abnormal calcifications seen.
- Pancreas** Head, body and tail echotexture are normal. Pancreatic duct normal. No mass or cystic lesions seen. No calcifications are seen.
- Kidneys** Right kidney Measures : 105 x 38 mm
Left kidney Measures : 108 x 52 mm

Peri renal areas normal, Renal capsule normal, Cortical thickness,
Cortical echopattern and corticomedullary differentiation are normal.
Pelvicalyceal system normal. No calculus or no mass lesions are seen.
- Urinary Bladder** Minimally distended, Normal wall thickness. No evidence of calculi. No focal lesions.
- Prostate** Echotexture normal. No calcification seen. Volume - 19 cc.
- Others** Aorta and IVC are normal. No lymphadenopathy. No ascitis.
- Impression** ** *Boderline Hepatomegaly with Grade 1 fatty liver.*
