THYROID FUNCTION TEST

Parameter	Result	Unit	Biological Ref. Interval
Thyroid Stimulating Hormone (TSH) <small>CLIA</small>	5.930	μ U/ml	0.35 - 5.50

Remarks:

- Thyroid-stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-releasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulates the thyroid gland to synthesize and secrete T3 and T4.
- Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism.
- In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

TSH levels During Pregnancy :

- First Trimester : 0.1 to 2.5 μ U/mL
- Second Trimester : 0.2 to 3.0 μ U/mL
- Third trimester : 0.3 to 3.0 μ U/mL
- Reference: Carl A.Burtis,Edward R.Ashwood,David E.Bruns. Tietz Textbook of Clinical Chemistry and Molecular Diagnostics. 5th Edition. Philadelphia: WB Saunders,2012:2170

Triiodothyronine (T3) <small>CLIA</small>	0.98	ng/mL	0.6 - 1.81
---	-------------	--------------	-------------------

Clinical Significance:

- Triiodothyronine (T3) is a hormone synthesized and secreted by the thyroid gland in response to the pituitary hormone TSH and is regulated by a negative feedback mechanism involving the thyroid gland, pituitary gland, and hypothalamus.
- In the circulation, 99.7% of T3 is reversibly bound to transport proteins, primarily thyroxine-binding globulin (TBG) and to a lesser extent albumin and prealbumin. The remaining unbound T3 is free in the circulation and is metabolically active.
- In hypothyroidism and hyperthyroidism, FT3 levels parallel changes in total T3 levels. Measuring FT3 is useful in certain conditions such as normal pregnancy and steroid therapy, when altered levels of total T3 occur due to changes in T3 binding proteins, especially TBG.

Thyroxine (T4) 9.00 µg/dL 4.5 - 12.6
CLIA

Clinical Significance :

- Thyroxin (T4) is a hormone synthesized and secreted by the thyroid gland in response to the pituitary hormone TSH and is regulated by a negative feedback mechanism involving the thyroid gland, pituitary gland, and hypothalamus. In the circulation, 99.95% of T4 is reversibly bound to transport proteins, primarily thyroxine-binding globulin (TBG) and to a lesser extent albumin and thyroxine-binding prealbumin. The remaining unbound T4 is free in the circulation and is both metabolically active and a precursor to T3.
- In hypothyroidism and hyperthyroidism, FT4 levels parallel changes in total T4 levels. Measuring FT4 is useful in certain conditions such as normal pregnancy and steroid therapy, when altered levels of total T4 occur due to changes in T4 binding proteins, especially TBG.

Limitations:

- The anticonvulsant drug phenytoin may interfere with total and FT4 levels due to competition for TBG binding sites.
- FT4 values may be decreased in patients taking carbamazepine.
- Thyroid autoantibodies in human serum may interfere and cause falsely elevated FT4 results.

STOOL EXAMINATION

Parameter	Result	Unit	Biological Ref. Interval
Colour	Yellow		
Consistency	Solid		
CHEMICAL EXAMINATION			
Occult Blood <i>Peroxidase Reaction with o-Dianisidine</i>	Negative		
Reaction <i>pH Strip Method</i>	Alkaline		
Reducing Substance	Absent		
MICROSCOPIC EXAMINATION			
Mucus	Absent		
Pus Cells	Absent		
Red Cells	Absent		
Epithelial Cells	Absent		
Vegetable Cells	Absent		
Trophozoites	Absent		
Cysts	Absent		
Ova	Absent		
Neutral Fat	Absent		
Monilia	Absent		
Bacteria	Absent		

Note: Stool occult blood test is highly sensitive to peroxidase like activity of free hemoglobin.

False negative: False negative occult blood test may be observed in case of excess (>250mg/day) Vitamin C intake and in case of occasional unruptured RBCs.

False positive: False positive occult blood test may be observed in stool samples containing vegetable peroxidase (turnips, horseradish, cauliflower, brocoli, cantaloupe, parsnips) and myoglobin from food (meat diet) intake.
