Conclusion:

- **Normal LV Systolic function**
- **LVEF: 64 % ,No RWMA**
- **Cardiac Chambers: Normal**
- **Diastolic function: No LVDD**
- **TR: Mild PAH: No , RVSP: 12 mmhg**
- **No MR/MS**
- **No AR , No AS**
- **ASD/VSD/PDA/Co-A : No**
- **No Clots or vegetations found**
- **IVC: Normal**

NAME : Mrs Sunita Behera	AGE : 37 Y/F	DATE : 15/05/2022
---------------------------------	---------------------	--------------------------

ULTRASONOGRAPHY OF WHOLE ABDOMEN
(Screening Only)

Liver is normal in size and echotexture and shows normal parenchymal reflectivity. No focal lesion is seen. Hepatic veins appear normal. There is no evidence of any dilated intra hepatic biliary radicals.

Portal Vein appears normal in diameter.

Common Bile Duct is of normal diameter.

Gallbladder is physiologically distended with normal wall thickness. There is no evidence of gallstones. No evidence of peri-cholecystic fluid or probe tenderness.

Pancreas is normal in size and shows homogenous reflectivity. There is no evidence of any calcification or ductal dilatation.

Spleen is normal size and shows a homogenous echotexture. There is no evidence of any focal lesion.

Both Kidneys are normal in position and size. They show normal cortical reflectivity and cortico-medullary distinction. Right kidney measures 99x49mm. Left kidney measures 92x45mm. There is no evidence of renal calculi, hydronephrosis or mass seen.

Bladder is well distended and shows normal wall thickness. No evidence of intra-luminal mass or calculi.

Uterus appears normal in size. Uterine myometrial echotexture is homogeneous. No focal lesion is seen. CET measures 5mm.

Both Ovaries appears normal in size & reflectivity. No evidence of any adnexal mass.

There is no evidence of ascites.
No evidence of any gross bowel mass seen.
No evidence of any aorto-caval or mesenteric root lymphadenopathy.
No mass or collection in right iliac fossa.

CONCLUSION: No sonographic abnormality is seen.

THYROID FUNCTION TEST

Test Name	Result	Units	Biological Reference Interval
Serum T3 :	0.85	ng/ml	[0.60 - 1.81]
Serum T4 :	6.29	µg/dl	[4.50 - 12.6]
Serum TSH : (CHEMILUMINESCENCE)	1.359	µIU/ml	[0.55 - 4.78]

Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-releasing hormone (TRH), directly stimulates TSH production. TSH

stimulates thyroid cell production and hypertrophy, also stimulate the thyroid gland to synthesize and secrete T3 and T4.

Quantification of TSH is significant to

differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly

elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

TSH levels During Pregnancy :

- First Trimester : 0.1 to 2.5 µIU/mL
- Second Trimester : 0.2 to 3.0 µIU/mL
- Third trimester : 0.3 to 3.0 µIU/mL

HBA1C [Glycosylated Haemoglobin]

Test Name	Result	Units	Biological Reference Interval
Glycosylated Haemoglobin : (HBA1C)	5.7	%	Excellent control: 4.2-6.2 Good Control : 6.3-7.2 Fair Control : 7.3-8.2 Poor Control : >8.3
Estimated Average glucose :	116.89	mg/dl	

Comment : *As per the new 2009 update of American Diabetes Association regarding HbA1C & Mean Blood Glucose relationship.

NOTE: This test is used to monitor diabetic patients compliance with the therapeutic regimen and long term blood glucose control. It's level is proportional to both the average blood glucose concentration and the life span of the red blood cells (RBC) in circulation. HbA1c values are free of day to day glucose fluctuations and are unaffected by exercise or recent food intake.

PAP SMEAR CYTOLOGY (CONVENTIONAL)

Specimen

Pap smear for cytology (conventional)

Gross Description

Received one unstained smear.
Smear-1 [PAP]

Microscopic Description

See below in diagnosis.

Diagnosis

Satisfactory for evaluation.

PAP Smears is negative for intra-epithelial lesion or malignancy.

Trichomonas or monilia are not seen.

Endo cervical cells are not seen.

PAP test is a screening test for cervical cancer with inherent false negative results.

----- End Of Report -----

All cytology tests reveal only cytological characteristics of individual cells and not architectural details which are very important in morphological diagnosis. All cytology methods have their own inherent limitations of false positive and false negative results due to variabilities related to sample collection methods, smear preparation, fixation and staining along with microscopic interpretation, hence whenever required tissue diagnosis and/or immunohistochemistry study after correlation with clinical and radiological findings should be done for further confirmation before any definitive medical or surgical treatment.
