USG ABDOMEN WITH PELVIS :

Real time sonography of the abdomen and pelvis was performed using the 3.5 MHz transducer.

The liver is normal in size and shows moderate increased echogenicity suggesting fatty infiltration. No focal parenchymal lesion noted.

Intrahepatic biliary tree and venous radicles are normal.

The portal vein and CBD appear normal in course and calibre.

The gall bladder is normal in size with a normal wall thickness and there are no calculi noted within.

The pancreas is normal in size and echotexture. No evidence of focal lesion or calcification or duct dilatation seen.

The spleen is normal in size and echotexture.

Both kidneys are normal in size, position and echogenicity.

Cortical thickness and corticomedullary differentiation are normal.

No hydronephrosis or calculi noted.

The bladder is normal in contour, capacity and wall thickness. No vesical calculi noted.

The prostate is normal in size and homogenous in echotexture.

There is no evidence of ascites.

Impression :

Grade II fatty infiltration of liver.

2D ECHOCARDIOGRAPHY & COLOUR DOPPLER REPORT

Name : Mr. Shantanu Moharil

Age / Sex: 33 Yrs./ Male

Done By : Dr. Nitin Tiwari

Date : August 26, 2023

OPD

UHID No. 343841

Comments:

Sector echo done in plax, psax, apical 4 & 5 chambers, subcostal view shows:

Normal mitral, aortic, tricuspid and pulmonary valves in dimensions and morphology.

The left atrium, right atrium and right ventricle are normal in dimension and morphology. The left ventricle shows **moderate concentric hypertrophy** with **apical hypertrophy and thickened (25 mm)**. There is no regional wall motion abnormality of left ventricle at rest. The global left ventricular ejection fraction is 65 %.

The IAS and IVS are intact.

The pericardium is normal. There is no pericardial effusion.

There is no clot or vegetation seen.

CW, PW and Colour Doppler: Transmitral flow is suggestive of grade I left ventricular diastolic dysfunction. There is no evidence of pulmonary hypertension.

Impression:

Apical hypertrophic cardiomyopathy

Moderate concentric left ventricular hypertrophy

No regional wall motion abnormality at rest present

Good left ventricular systolic function, LVEF – 65 %

Grade I LV diastolic dysfunction present

Opinion : If there is any Blood group discrepancy, it may be because of the irregular antibody present in the blood. This requires proper evaluation of Antibody Identification and Rh Phenotyping.

Remark :**Principle of the Test :**

As the Matrix gel card containing red blood cells is centrifuged under specific conditions, the red blood cells sensitized with antibody will agglutinate in the presence of the Anti-Human Globulin reagent in the gel matrix and will be trapped in the gel column. The red blood cells, which do not react are not trapped in the gel matrix and are pelleted at the bottom of the column.

The reactions are then read and graded according to their reactivity pattern.
