Test Name	Value	Unit	Biological Ref Interval
RDW- CV%* ,EDTA <i>Method : Forward Grouping</i>	13.5	%	10.0 - 14.5
Blood Group ABO* ,EDTA <i>Method : Forward Grouping</i>	"O"		
Rh Typing ,EDTA <i>Method : Forward Grouping</i>	POSITIVE		
HbA1c* ,EDTA <i>Method : Photometric method</i>	5.1	%	

INTERPRETATIONS:-

Non Diabetic level/Normal	4.50 - 6.00	%
Good Diabetic Control	6.00 - 6.80	%
Fair Diabetic Control	6.80 - 7.60	%
Uncontrolled Diabetes -action suggested	>7.6	%

Note:-

Glycosylated Haemoglobin is a specific component of HBA1C and is the blood glucose bound to it. This test is an index of carbohydrate in balance during the preceding two months. The estimation is of greater importance for specific group of patient. This result are not affected by time, meal intake exercise, diabetic drugs, emotional Stress etc. HbA1c should be routinely monitored ideally at least every 3 months.

Total CHO/HDL Cholesterol Ratio* ,Serum Plain <i>Method : Calculated</i>	6.43		
LDL/HDL Cholesterol Ratio* ,Serum Plain <i>Method : Calculated</i>	4.60		

* Guidelines for Total Blood Cholesterol Levels on 11 to 12 hour fasting samples.

Desirable : Less than 200 mg/dl

Borderline High Risk : 200 to 239 mg/dl

High Risk : 240 mg/dl and over, on repeated values

Optimal Level for Cardiac Patients : Less than 200 mg/dl

HDL-C : High HDL has generally been found to be protective, decreasing the risk of coronary Artery disease (CAD) in most people. However, some recent studies have shown that in some people with high HDL, the HDL is not protective and may, in fact result in higher risk for CAD than in people with normal HDL levels. In one study it was shown that people with CAD and high HDL had underlying genetic anomalies in enzymes important in lipid turnover. Another study showed that high levels of abnormally large HDL particles were associated with increased risk of CAD. Factors that elevate HDL concentrations include chronic alcoholism, treatment with oral estrogen replacement therapy, extensive aerobic exercise, and treatment with niacin, statins, or fibrates. Smoking reduces levels of HDL cholesterol, while quitting smoking leads to a rise in the plasma HDL level.

LDL Reference Range : Levels in terms of risk for coronary heart disease :

Adult levels:

Optimal <100 mg/dL

IMMUNOASSAY

TOTAL THYROID PROFILE# ,Serum Plain

Triiodothyronine (T3)	1.08	ng/ml	0.50 - 2.00
Thyroxin (T4)	7.98	ug/dl	4.40 - 11.60
Thyroid Stimulating Hormone (TSH)	4.23	uIU/mL	0.39 - 6.16

Comments :

The levels of thyroid hormone (T3&T4) are low in case of primary secondary and tertiary hypothyroidism and sometimes in nonthyroidal illness also. Increased levels are found in grave-s disease, hyperthyroidism and thyroid hormone resistance. T3 levels are also raised in T3 thyrotoxicosis. TSH levels are raised in primary hypothyroidism and are low in hyperthyroidism and secondary

-----------	-------	------	-------------------------

PSA (Prostate Specific Antigen [Total])	0.374	Normal : 0.0-4.0 Borderline : 4.0-10.0 ng/ml
---	-------	---

INTERPRETATION

Prostate-specific antigen (PSA), a glycoprotein is produced by the prostate gland, the lining of the urethra, and the bulbourethral gland. Normally, very little PSA is secreted in the blood. Increases in glandular size and tissue damage caused by benign prostatic hypertrophy, prostatitis, or prostate cancer may increase circulating PSA levels. PSA exists in serum in multiple forms: complexed to alpha-1-anti-chymotrypsin (PSA-ACT complex), unbound (free PSA), and enveloped by alpha-2-macroglobulin (not detected by immunoassays). When total PSA concentration is <2.0 ng/ml, the probability of prostate cancer in asymptomatic men is low, further testing and free PSA may provide little additional information. When total PSA concentration is >10.0 ng/mL, the probability of cancer is high and prostate biopsy is generally recommended. The total PSA range of 4.0 to 10.0 ng/ml has been described as a diagnostic "gray zone," in which the free:total PSA ratio helps to determine the relative risk of prostate cancer. Therefore, some urologists recommend using the free:total ratio to help select which men should undergo biopsy. However even a negative result of prostate biopsy does not rule-out prostate cancer. Up to 20% of men with negative biopsy results have subsequently been found to have cancer. Higher total PSA levels and lower percentages of free PSA are associated with higher risks of prostate cancer. Based on free:total PSA ratio: the percent probability of finding prostate cancer on a needle biopsy by age in years:

Free PSA as a percent of Total PSA	Probability of carcinoma prostate when Total PSA is 4.1 - 10.0 ng / ml
>=	26.8 %
20 - 25	16 %
15 - 20	20 %
10 - 15	28 %
0 - 10	56 %

Comments:-

False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy. PSA total and free levels may appear consistently elevated / depressed due to the interference by heterophilic antibodies and nonspecific protein binding. Results obtained with different assay kits cannot be used interchangeably. All results should be correlated with clinical findings and results of other investigations

ULTRASOUND - WHOLE ABDOMEN

LIVER is normal in size with normal outline and echotexture. No focal lesion is seen. Intra hepatic biliary radicals are normal. Portal vein is normal in course and caliber.

GALL BLADDER is adequately distended. Wall thickness is normal and shows multiple gall stones of size 6-8 mm. Common bile duct is normal.

PANCREAS is normal in size shape and echotexture.

RETROPERITONEUM does not reveal any obvious abnormality.

SPLEEN is normal in size with normal echotexture. Splenic vein is normal.

RIGHT KIDNEY is normal in size measures 102 x 42 mm, shape and echotexture. Corticomedullary differentiation is maintained. No evidence of any calculus or hydronephrosis is seen.

LEFT KIDNEY is normal in size measures 90.7x 49.2 mm, shape and echotexture. Corticomedullary differentiation is maintained. No evidence of any calculus or hydronephrosis is seen.

URINARY BLADDER is adequately distended. No mass or calculus seen.

PROSTATE: is normal size measures 31 x 21 x 25 mm, volume is 12.2.c.c. and shows normal echotexture No diffuse or focal lesion seen.

No free fluid is seen in the peritoneal cavity.

OPINION:

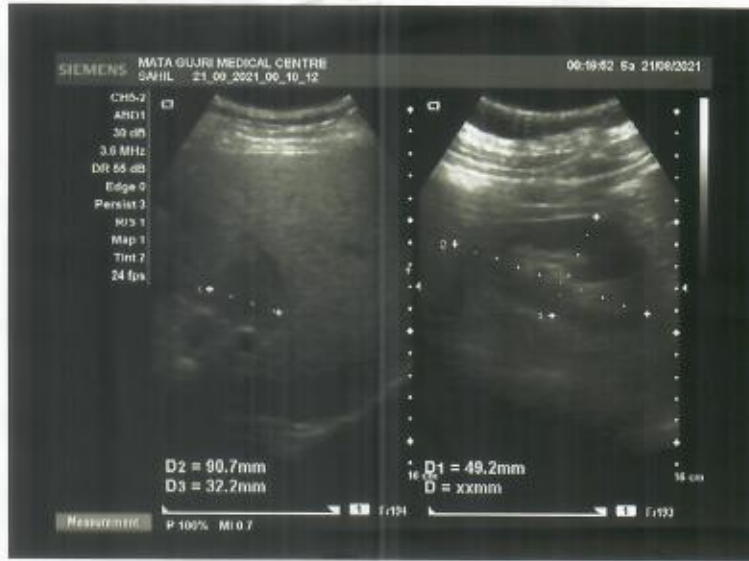

ULTRASOUND WHOLE ABDOMEN REVEALS GALL BLADDER CALCULI

ADVISE: CLINICAL CORRELATION.
