Test Name	Value	Unit	Biological Ref Interval
-----------	-------	------	-------------------------

RDW- CV%\* .EDTA 13.8 % 10.0 - 14.5

Blood Group ABO .EDTA "O"  
Method : Forward Grouping

Rh Typing .EDTA POSITIVE  
Method : Forward Grouping

HbA1c .EDTA 5.2 %  
Method : Photometric method

**INTERPRETATIONS:-**

**NORMAL RANGE 4.00 - 5.60 %**

Pre Diabetic/ Higher chance of getting diabetes	5.70 - 6.20	%
Good Diabetic Control	6.20 - 6.80	%
Fair Diabetic Control	6.80 - 7.60	%
Uncontrolled Diabetes -action suggested	>7.6	%

**Note:-**

Glycosylated Haemoglobin is a specific component of HBA1C and is the blood glucose bound to it. This test is an index of carbohydrate in balance during the preceeding two months. The estimation is of greater importance for specific group of patient. This result are not affected by time, meal intake exercise, diabetic drugs, emotional Stress etc. HbA1c should be routinely monitored ideally at least every 3 months.

**BIOCHEMISTRY**

**LIPID PROFILE**

Total Lipids .Serum Plain	430	mg/dl	400 - 700
Serum Cholesterol .Serum Plain <i>Method : CHOD-POD</i>	160	mg/dl	0 - 200
Serum Triglycerides .Serum Plain <i>Method : GOD-POD</i>	110	mg/dl	40 - 200
Serum HDL Cholesterol .Serum Plain <i>Method : Direct Method</i>	40.0	mg/dl	40.0 - 70.0
Serum LDL Cholesterol .Serum Plain <i>Method : Calculated</i>	98.0	mg/dl	30.0 - 100.0
Serum VLDL Cholesterol .Serum Plain <i>Method : Calculated</i>	22.0	mg/dl	24.0 - 45.0
Total CHO/HDL Cholesterol Ratio .Serum Plain <i>Method : Calculated</i>	4.00		
LDL/HDL Cholesterol Ratio .Serum Plain <i>Method : Calculated</i>	2.45		

Guidelines for Total Blood Cholesterol Levels on 11 to 12 hour fasting samples.

Desirable : Less than 200 mg/dl

Borderline-High Risk : 200 to 239 mg/dl

High Risk : 240 mg/dl and over, on repeated values

Optimal Level for Cardiac Patients : Less than 200 mg/dl

HDL-C : High HDL has generally been found to be protective, decreasing the risk of coronary Artery disease (CAD) in most people. However, some recent studies have shown that in some people with high HDL, the HDL is not protective and may, in fact result in higher risk for CAD than in people with normal HDL levels. In one study it was shown that people with CAD and high HDL had underlying genetic anomalies in enzymes important in lipid turnover. Another study showed that high levels of abnormally large HDL particles were associated with increased risk of CAD. Factors that elevate HDL concentrations include chronic alcoholism, treatment with oral estrogen replacement therapy, extensive aerobic exercise, and treatment with niacin, statins, or fibrates. Smoking reduces levels of HDL cholesterol, while quitting smoking leads to a rise in the plasma HDL level.

LDL Reference Range :

Levels in terms of risk for coronary heart disease :

Adult levels:

Optimal

<100 mg/dL

Near Optimal, above optimal

100 -129 mg/dL

Borderline high

130 - 159 mg/dL

High

160 - 189 mg/dL

Very High

≥190 mg/dL

### IMMUNOASSAY

#### TOTAL THYROID PROFILE .Serum Plain

Triiodothyronine (T3)	1.74	ng/ml	0.50 - 2.00
Thyroxin (T4)	7.83	ug/dl	4.40 - 11.60
Thyroid Stimulating Hormone (TSH)	2.56	uIU/mL	0.39 - 6.16

**Comments :**

The levels of thyroid hormone (T3&T4) are low in case of primary secondary and tertiary hypothyroidism and sometimes in nonthyroidal illness also. Increased levels are found in grave-s disease, hyperthyroidism and thyroid hormone resistance. T3 levels are also raised in T3 thyrotoxicosis. TSH levels are raised in primary hypothyroidism and are low in hyperthyroidism and secondary

Test Name	Value	Unit	Biological Ref Interval
-----------	-------	------	-------------------------

PSA (Prostate Specific Antigen [Total])	0.60		Normal : 0.0-4.0 Borderline : 4.0-10.0 ng/ml
---	------	--	---

**INTERPRETATION**

Prostate-specific antigen (PSA), a glycoprotein is produced by the prostate gland, the lining of the urethra, and the bulbourethral gland. Normally, very little PSA is secreted in the blood. Increases in glandular size and tissue damage caused by benign prostatic hypertrophy, prostatitis, or prostate cancer may increase circulating PSA levels. PSA exists in serum in multiple forms: complexed to alpha-1-anti-chymotrypsin (PSA-ACT complex), unbound (free PSA), and enveloped by alpha-2-macroglobulin (not detected by immunoassays). When total PSA concentration is <2.0 ng/ml, the probability of prostate cancer in asymptomatic men is low, further testing and free PSA may provide little additional information. When total PSA concentration is >10.0 ng/mL, the probability of cancer is high and prostate biopsy is generally recommended. The total PSA range of 4.0 to 10.0 ng/ml has been described as a diagnostic "gray zone," in which the free:total PSA ratio helps to determine the relative risk of prostate cancer. Therefore, some urologists recommend using the free:total ratio to help select which men should undergo biopsy. However even a negative result of prostate biopsy does not rule-out prostate cancer. Up to 20% of men with negative biopsy results have subsequently been found to have cancer. Higher total PSA levels and lower percentages of free PSA are associated with higher risks of prostate cancer. Based on free:total PSA ratio: the percent probability of finding prostate cancer on a needle biopsy by age in years:

Free PSA as a percent of Total PSA	Probability of carcinoma prostate when Total PSA is 4.1 - 10.0 ng / ml
>=	26.8 %
20 - 25	16 %
15 - 20	20 %
10 - 15	28 %
0 - 10	56 %

**Comments:-**

False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy. PSA total and free levels may appear consistently elevated / depressed due to the interference by heterophilic antibodies and nonspecific protein binding. Results obtained with different assay kits cannot be used interchangeably. All results should be correlated with clinical findings and results of other investigations

**WHOLE ABDOMEN SCAN**

Liver is normal in size and shows echotexture is normal. Normal intrahepatic biliary radicles and normal appearing venous channels noted. No focal lesion in either lobes. Portal vein is normal. No sub-diaphragmatic collection or pleural effusion.

Gall bladder is normal distended and shows echofree lumen.  
CBD: not dilated ; apparently echofree.

Both the kidneys are normal in size, position and echopattern with normal corticomedullary differentiation.

RK: 9.7 x 3.9 cm

LK: 10.0 x 4.8 cm.

Pancreas is of normal size & echopattern. No focal lesion or peri-pancreatic collection.

Spleen is of normal size and echopattern. No focal lesion or calcification. Splenic vein is not dilated.

Aorta and IVC are normal. No retroperitoneal lymphadenopathy.

Urinary bladder shows normal distension and shows normal wall-thickness. No calculus or mass.

Prostate is normal and weighs 15 gms, echopattern is homogenous

Bowel loops are normal.

No free fluid is seen in abdomen.

**IMPRESSION:**

**Sonological study is normal.**

### RESULTS

Exercise Duration 15:11 Minutes  
 Max Heart Rate 167 bpm 90 % of target heart rate 184 bpm  
 Max Blood Pressure 150/80 mmHg  
 Max Work Load 20.00 METS  
 Reason of Termination

### IMPRESSIONS

*Negative for MI*
