HAEMATOLOGY

results unit reference

ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate) **36** mm/1hr 00 - 20

Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

BIOCHEMISTRY

results unit reference

BLOOD SUGAR F, Sodium Fluoride Pla

Blood Sugar (F) 98.1 mg/dl 70 - 110

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions.

High levels of serum glucose may be seen in case of Diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents.

Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

OPD	: OPD		

BIOCHEMISTRY

	results	unit	reference
LIPID PROFILE, Serum			
S. Cholesterol	177.0	mg/dl	< - 200
HDL Cholesterol	86.9	mg/dl	42.0 - 88.0
LDL Cholesterol	74.8	mg/dl	50 - 150
VLDL Cholesterol	15.3	mg/dl	00 - 40
Triglyceride	76.5	mg/dl	00 - 170
Chloestrol/HDL RATIO	2.0	%	3.30 - 4.40

INTERPRETATION:

Lipid profile or lipid panel is a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides. The results of this test can identify certain genetic diseases and can determine approximate risks for cardiovascular disease, certain forms of pancreatitis, and other diseases.

BLOOD SUGAR (PP), Serum

SUGAR PP	100.3	mg/dl	80 - 140
----------	-------	-------	----------

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions. High levels of serum glucose may be seen in case of diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents. Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

Globulin	2.61	gm/dl	2.0 - 4.0
Albumin/Globulin Ratio	1.63	%	

INTERPRETATION

A Liver Function test or one or more of its component tests may be used to help diagnose liver disease if a person has symptoms that indicate possible liver dysfunction. If a person has a known condition or liver disease, testing may be performed at intervals to monitor liver status and to evaluate the effectiveness of any treatments.

TEST NAME

VALUE

ABO

"O"

Rh

NEGATIVE

Comments:

Human red blood cell antigens can be divided into four groups A, B, AB AND O depending on the presence or absence of the corresponding antigens on the red blood cells. There are two glycoprotein A and B on the cell's surface that are responsible for the ABO types. Blood group is further classified as RH positive and RH negative.

Ref. By : DR VINOD BHATT	Reported : 04/Mar/2023 03:06PM
SRF No. :	Panel : SJM Hospital
Aadhar-Nation : - Indian	Passport No. :

Test Name	Value	Unit	Bio Ref.Interval
-----------	-------	------	------------------

HbA1C(Glycosylated Hemoglobin):EDTA

Hb A1C, GLYCOSYLATED Hb ,EDTA HPLC	5.50	%	
Average Glucose Calculated	111.15	mg/dL	<125.0

Interpretation:

AS PER AMERICAN DIABETES ASSOCIATION (ADA)

REFERENCE GROUP	HbA1c IN %
NON DIABETIC	< 6.0 %
GOOD CONTROL	6 – 7 %
FAIR CONTROL	7 – 8 %
ACTION SUGGESTED	FOR MORE THAN 8 %

Result done on : Tosoh Automated Glycohemoglobin Analyzer.

Comment :

Glycosylated Hb is a normal adult Hb which is covalently bounded to a glucose molecule. Glycosylated Hb concentration is dependent on the average blood glucose concentration and is stable for the life of the RBC (120 days). Glycohaemoglobin serves as suitable marker of metabolic control of diabetics. Its estimation is unaffected by diet, insulin, exercise on day of testing and thus reflects average blood glucose levels over a period of last several weeks /months. There is a 3 - 4 week time before percent Glycohaemoglobin reflects changes in blood glucose levels.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

1. Glycosylated hemoglobin (HbA1c) test is three monthly monitoring done to assess compliance with therapeutic regimen in diabetic patients.
2. Since Hb1c reflects long term fluctuations in blood glucose concentration, a diabetic patient who has recently under good control may still have high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.
3. Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0%

-----------	-------	------	------------------

may not be appropriate.

4.High HbA1c (>9.0 -9.5 %) is strongly associated with risk of development and rapid progression of microvascular and nerve complications

5.Any condition that shorten RBC life span like acute blood loss, hemolytic anemia falsely lower HbA1c results.

6.HbA1c results from patients with HbSS,HbSC and HbD must be interpreted with caution , given the pathological processes including anemia,increased

red cell turnover, and transfusion requirement that adversely impact HbA1c as a marker of long-term glycemic control.

7.Specimens from patients with polycythemia or post-splenectomy may exhibit increase in HbA1c values due to a somewhat longer life span of the red cells.

Ultrasound Report

NAME: Mrs,Geeta sharma

AGE: 47yrs

DATE: 04/03/2023

Real time USG of abdomen and pelvis reveals –

LIVER--Liver appears normal in size and shape, contour and echopattern. There is no evidence of any focal lesion seen in the parenchyma. Intra-hepatic vascular and biliary radicles appear normal. Portal vein and common bile duct are normal.

GALL BLADDER- Gall bladder is physiologically distended. The wall thickness is normal. There is evidence of **multiple calculus seen in gb.**

PANCREAS-Pancreas is normal in size, shape and echo pattern. No focal mass lesion seen. Pancreatic duct is not dilated.

SPLEEN-Spleen show normal size, shape and homogeneous echopattern.No focal mass lesion is seen in parenchyma.

KIDNEY -Both the kidneys are normal in size, shape, position and axis. Parenchymal echopattern is normal bilaterally. No focal solid or cystic lesion is seen. There is no evidence of renal calculi on either side

RETROPERITONIUM- -There is non evidence of Para – aortic adenopathy seen. Retroperitoneal structures appear normal. Ascites fluid is not seen and no pleural effusion seen in both side.

URINARY BLADDER- Adequately distended. Walls were regular and thin. Contents are Normal. No stone formation seen.

UTERUS-Uterus and both ovaries are normal in size, shape and echopattern. No focal lesion is seen. Endometrial appears normal. There is no evidence of free fluid seen in the pelvis. There is no evidence of adnexal mass is seen.

IMPRESSION: Cholelithiasis

Patient ID.	21549 OPD	Name	MRS. GEETA SHARMA	Sex/Age	F/47Y
Date	04-03-2023 11:07 AM	Ref. Physician		CHEST, CHEST	

X-RAY CHEST PA VIEW

OBSERVATION:

The lung fields are clear.

Both hila are normal.

Cardiophrenic and costophrenic angles are normal.

The trachea is central.

The mediastinal and cardiac silhouette are normal.

Cardiothoracic ratio is normal.

Bones of the thoracic cage are normal.

Soft tissues of the chest wall are normal.

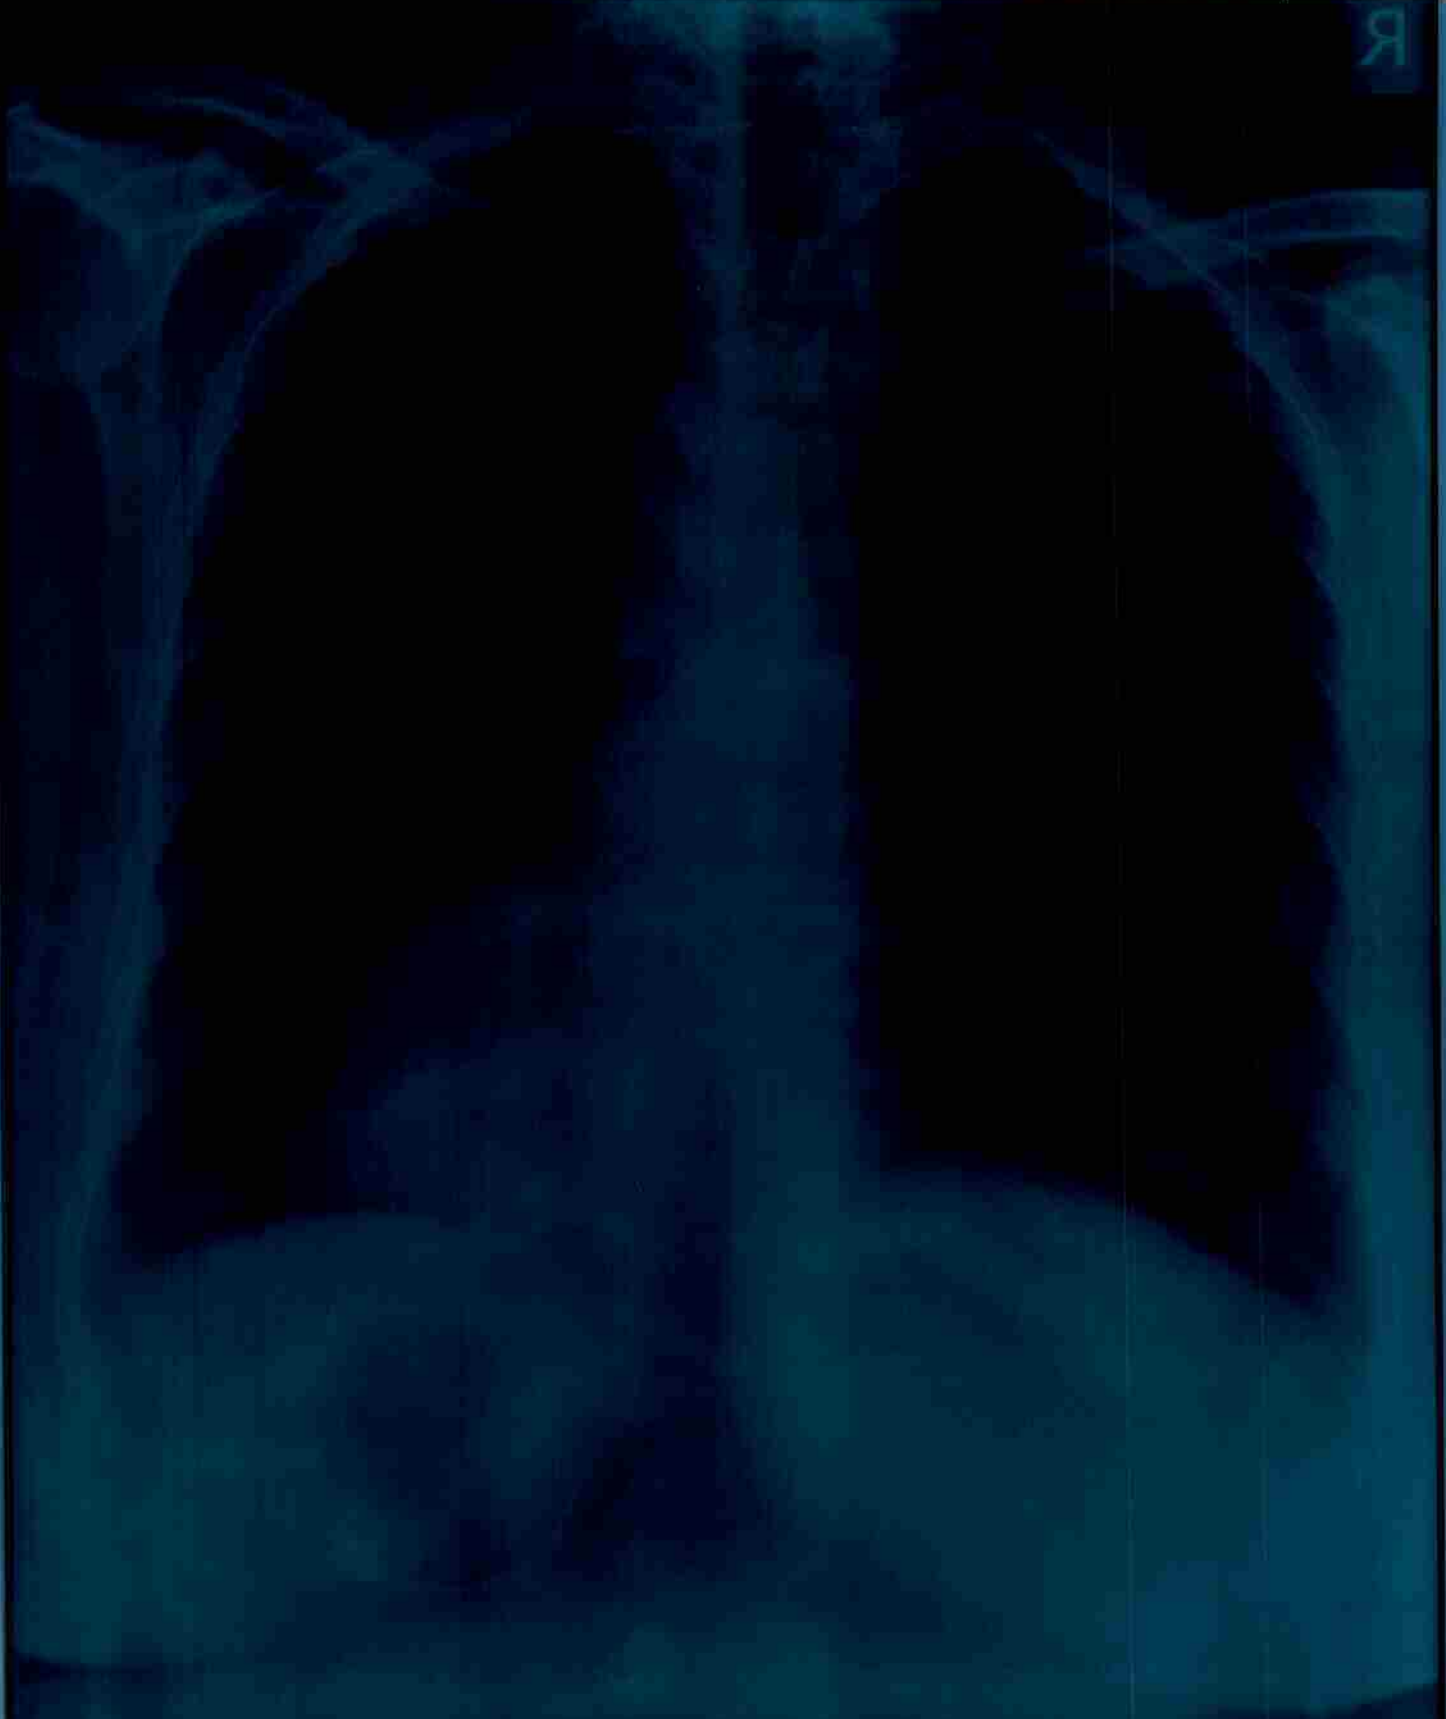

IMPRESSION:

- No significant abnormality seen.
