<b>PROSTATE SPECIFIC ANTIGEN</b>			
PSA	0.450	ng/mL	0 - 4
<i>Method: CLIA</i>			
Sample Type: Serum			

**Note:**  
PSA is a glycoprotein that is produced by the prostate gland, the lining of the urethra, and the bulbourethral gland. Normally, very little PSA is secreted in the blood. Increases in glandular size and tissue damage caused by benign prostatic hypertrophy, prostatitis, or prostate cancer may increase circulating PSA levels.  
Digital rectal examination generally does not increase normal prostate-specific antigen (PSA) values. However, cystoscopy, urethral instrumentation, and prostate biopsy may increase PSA levels.

- Useful For**
1. Evaluating patients with documented prostate problems in whom multiple prostate-specific antigen tests may be necessary per year
  2. Monitoring patients with a history of prostate cancer as an early indicator of recurrence and response to treatment.
  3. Prostate cancer screening.
