Immunology and Serology

THYROID PROFILE, TOTAL, SERUM

Method: ECLIA

Machine Name: Vitros ECI

Test Name	Result	Flag	Unit	Reference Range
T3, Total	2.35	H	ng/ml	0.8-2.0
T4, Total	12.9		µg/dL	5.10-14.10
TSH (Ultrasensitive)	2.77		mIU/mL	0.27-4.2

Interpretation:

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4.a.m. and at a minimum between 6-10 pm . The variation is of the order of 50% . hence time of the day has influence on the measured serum TSH concentrations.
2. Alteration in concentration of Thyroid hormone binding protein can profoundly affect Total T3 and/or Total T4 levels especially in pregnancy and in patients on steroid therapy.
3. Unbound fraction (Free,T4 /Free,T3) of thyroid hormone is biologically active form and correlate more closely with clinical status of the patient than total T4/T3 concentration
4. Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals.
