HAEMATOTOLOGY

results	unit	reference
---------	------	-----------

ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate)	14	mm/1hr	00 - 22
--------------------------------------	----	--------	---------

Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

BIOCHEMISTRY

results	unit	reference
---------	------	-----------

BLOOD SUGAR F, Sodium Fluoride Pla

Blood Sugar (F)	92.8	mg/dl	70 - 110
-----------------	------	-------	----------

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions.

High levels of serum glucose may be seen in case of Diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents.

Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

BIOCHEMISTRY

	results	unit	reference
LIPID PROFILE, Serum			
S. Cholesterol	188.0	mg/dl	< - 200
HDL Cholesterol	42.3	mg/dl	35.3 - 79.5
LDL Cholesterol	98.8	mg/dl	50 - 150
VLDL Cholesterol	46.8	mg/dl	00 - 40
Triglyceride	234.3	mg/dl	00 - 170
Chloestrol/HDL RATIO	4.4	%	

INTERPRETATION:

Lipid profile Of lipid panel IS a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides. The results of this test can identify certain genetic diseases and can determine approximate risks for cardiovascular disease, certain forms of pancreatitis, and other diseases.

BLOOD SUGAR (PP), Serum

SUGAR PP	100.6	mg/dl	80 - 140
----------	-------	-------	----------

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions. INTERPRETATION

A Liver Function test or one or more of its component tests may be used to help diagnose liver disease if a person has symptoms that indicate possible liver dysfunction. If a person has a known condition or liver disease, testing may be performed at intervals to monitor liver status and to evaluate the effectiveness of any treatments.

<u>TEST NAME</u>	<u>VALUE</u>
------------------	--------------

ABO

"B"

Rh

POSITIVE

Comments:

Human red blood cell antigens can be divided into four groups A, B, AB AND O depending on the presence or absence of the corresponding antigens on the red blood cells. There are two glycoprotein A and B on the cell s surface that are responsible for the ABO types. Blood group is further classified as RH positive an RH negative.

Aadhar-Nation : - Indian	Passport No. :

Test Name	Value	Unit	Bio Ref.Interval
THYROID PROFILE.(TFT)SERUM*			
T3 ,Serum	128.00	ng/dl	69-215
T4 ,Serum	9.12	ug/dL	5.2-12.7
TSH(u ultrasensitive) ECLIA	2.4	uIU/mL	0.3-4.5

TSH	T3 / FT3	T4 / FT4	Suggested Interpretation for the Thyroid Function Tests Pattern
Within range	Decreased	Within range	Isolated Low T3-often seen in elderly & associated non-thyroidal illness. In elderly the drop in T3 level can be upto 25%.
Raised	Within range	Within Range	Isolated high TSH especially in the range of 4.7 to 15 mIU/ml is commonly associated with physiological & biological TSH variability.
			Subclinical Autoimmune Hypothyroidism
			Intermittent T4 therapy for hypothyroidism
			Recovery phase after non-thyroidal illness"
Raised	Decreased	Decreased	Chronic Autoimmune Thyroiditis
			Post thyroidectomy, post radioiodine
			Hypothyroid phase of transient thyroiditis"
			Interfering antibodies to thyroid hormones (anti-TPO antibodies)
Raised or within range	Raised	Raised / Normal	Intermittent T4 therapy or T4 overdose Drug interference- Amiodarone, Heparin, Beta blockers, steroids, anti-epileptics

Ref. By : Self	Reported : 08/Nov/2022 06:17PM
SRF No. :	Panel : SJM Hospital
Aadhar-Nation : - Indian	Passport No. :

Test Name	Value	Unit	Bio Ref.Interval
HbA1c(Glycosylated Hemoglobin):EDTA			
Hb A1c, GLYCOSYLATED Hb ,EDTA HPLC	5.70	%	
Average Glucose Calculated	116.89	mg/dL	<125.0

Interpretation:

AS PER AMERICAN DIABETES ASSOCIATION (ADA)

REFERENCE GROUP	HbA1c IN %
NON DIABETIC	< 6.0 %
GOOD CONTROL	6 - 7 %
FAIR CONTROL	7 - 8 %
ACTION SUGGESTED	FOR MORE THAN 8 %

Result done on : Tosoh Automated Glycohemoglobin Analyzer.

Comment :

Glycosylated Hb is a normal adult Hb which is covalently bounded to a glucose molecule. Glycosylated Hb concentration is dependent on the average blood glucose concentration and is stable for the life of the RBC (120 days). Glycohaemoglobin serves as suitable marker of metabolic control of diabetics. Its estimation is unaffected by diet, insulin, exercise on day of testing and thus reflects average blood glucose levels over a period of last several weeks /months. There is a 3 - 4 week time before percent Glycohaemoglobin reflects changes in blood glucose levels.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

1. Glycosylated hemoglobin (HbA1c) test is three monthly monitoring done to assess compliance with therapeutic regimen in diabetic patients.
2. Since Hb1c reflects long term fluctuations in blood glucose concentration, a diabetic patient who has recently under good control may still have high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.

Patient ID.	20117 OPD	Name	MR ARPIT GUPTA	Sex/Age	M/36Y
Date	08 11 2022 10:45 AM	Ref. Physician	SELF	CHEST, CHEST	

X-RAY CHEST PA VIEW

OBSERVATION:

The lung fields are clear.

Both hila are normal.

Cardiophrenic and costophrenic angles are normal.

The trachea is central.

The mediastinal and cardiac silhouette are normal.

Cardiothoracic ratio is normal.

Bones of the thoracic cage are normal.

Soft tissues of the chest wall are normal.

IMPRESSION:

No significant abnormality seen.

Ultrasound Report

Name: Mr. Arpit Gupta

Age:36yrs/M

Date: 08/11/2022

Ultrasound - Male Abdomen

Liver: Liver appears normal in size. There is no evidence of any focal lesion seen in the parenchyma. Intra-hepatic vascular and biliary radicles appear normal. Portal vein and common bile duct are normal.

GALL BLADDER: Gall bladder is physiologically distended. The wall thickness is normal. There is no Evidence of any intraluminal mass lesion or calculi seen.

PANCREAS: -Pancreas is normal in size, shape and echo pattern. No focal mass lesion seen. Pancreatic duct is not dilated.

SPLEEN: -Spleen show normal in size. No focal mass lesion is seen in parenchyma.

KIDNEYS: -Both the kidneys are normal in size, shape, position and axis. Parenchymal echo pattern is normal bilaterally. No focal solid or cystic lesion is seen. **Left kidney shows renal concretions. Right kidney shows two renal calculus meas. 4.1mm & 3.9mm in mid pole.**

PARAAORTIC REGIONS: Any mass/ lymph nodes: -- no mass or lymph nodes seen.

URINARY BLADDER:- Adequately distended. Wall were regular and thin. Contents are Normal. No stone formation seen.

PROSTATE: - Normal in shape and position. Parenchymal echotexture is normal. No free ascetic fluid or pleural effusion seen.

**IMPRESSION: - Left renal concretions.
Right renal calculus.**
