Thyroid Stimulating Hormone (TSH)

Test Name	Observed Values	Units	Biological Reference Intervals
-----------	-----------------	-------	--------------------------------

* TSH Method:ECLIA	2.33	µIU/mL	0.35 – 5.5 Pregnancy: 1 st trimester: 0.3- 4.5 2 nd trimester: 0.5- 4.6 3 rd trimester: 0.8- 5.2
-----------------------	------	--------	--

INTERPRETATION:

Thyroid-stimulating hormone (TSH, thyrotropin) is a glycoprotein having a molecular weight of approximately 30000 daltons and consisting of two subunits. The α -subunit carries the TSH-specific immunological and biological information, whereas the β -chain carries species-specific information and has an identical amino acid sequence to the β -chains of LH, FSH and hCG. The determination of TSH serves as the initial test in thyroid diagnostics.

Even very slight changes in the concentrations of the free thyroid hormones bring about much greater opposite changes in the TSH level. Accordingly, TSH is a very sensitive and specific parameter for assessing thyroid function and is particularly suitable for early detection or exclusion of disorders in the central regulating circuit between the hypothalamus, pituitary and thyroid.
