### HAEMATOLOGY

results unit reference

#### ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate) 14 mm/1hr 00 - 22

##### Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

### BIOCHEMISTRY

results unit reference

#### BLOOD SUGAR F, Sodium Fluoride Pla

Blood Sugar (F) 95.2 mg/dl 70 - 110

##### Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions.

High levels of serum glucose may be seen in case of Diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents.

Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

## Laboratory Report

Lab Serial no.	: LSHHI243033	Mr. No	: 99741
Patient Name	: Mr. BHANU PRAKASH KAUSHIK	Reg. Date & Time	: 04-Mar-2023 09:09 AM
Age / Sex	: 48 Yrs / M	Sample Receive Date	: 04-Mar-2023 09:23 AM
Referred by	: Dr. SELF	Result Entry Date	: 04-Mar-2023 01:17PM
Doctor Name	: Dr. Vinod Bhat	Reporting Time	: 04-Mar-2023 01:17 PM
OPD	: OPD		

### BIOCHEMISTRY

	results	unit	reference
<b>LIPID PROFILE, Serum</b>			
S. Cholesterol	<b>244.0</b>	mg/dl	< - 200
HDL Cholesterol	66.9	mg/dl	35.3 - 79.5
LDL Cholesterol	<b>150.2</b>	mg/dl	50 - 150
VLDL Cholesterol	26.9	mg/dl	00 - 40
Triglyceride	134.6	mg/dl	00 - 170
Chloestrol/HDL RATIO	3.6	%	

#### INTERPRETATION:

Lipid profile or lipid panel is a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides. The results of this test can identify certain genetic diseases and can determine approximate risks for cardiovascular disease, certain forms of pancreatitis, and other diseases.

### BLOOD SUGAR (PP), Serum

SUGAR PP	103.1	mg/dl	80 - 140
----------	-------	-------	----------

#### Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions. High levels of serum glucose may be seen in case of diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents. Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

## Laboratory Report

Lab Serial no.	: LSHHI243033	Mr. No	: 99741
Patient Name	: Mr. BHANU PRAKASH KAUSHIK	Reg. Date & Time	: 04-Mar-2023 09:09 AM
Age / Sex	: 48 Yrs / M	Sample Receive Date	: 04-Mar-2023 09:23 AM
Referred by	: Dr. SELF	Result Entry Date	: 04-Mar-2023 01:17PM
Doctor Name	: Dr. Vinod Bhat	Reporting Time	: 04-Mar-2023 01:17 PM
OPD	: OPD		

### BIOCHEMISTRY

	results	unit	reference
<b><u>LIVER FUNCTION TEST, Serum</u></b>			
Bilirubin- Total	0.79	mg/dL	0.1 - 2.0
Bilirubin- Direct	<b>0.35</b>	mg/dL	0.0 - 0.20
Bilirubin- Indirect	0.44	mg/dL	0.2 - 1.2
SGOT/AST	<b>43.6</b>	IU/L	00 - 35
SGPT/ALT	<b>78.7</b>	IU/L	00 - 45
Alkaline Phosphate	82.0	U/L	53 - 128
Total Protein	<b>6.17</b>	g/dL	6.4 - 8.3
Serum Albumin	4.35	gm%	3.50 - 5.20
Globulin	1.82	gm/dl	1.8 - 3.6
Albumin/Globulin Ratio	2.39	%	

#### INTERPRETATION

A Liver Function test or one or more of its component tests may be used to help diagnose liver disease if a person has symptoms that indicate possible liver dysfunction. If a person has a known condition or liver disease, testing may be performed at intervals to monitor liver status and to evaluate the effectiveness of any treatments.

### TEST NAME

### VALUE

ABO

"A"

Rh

POSITIVE

#### Comments:

Human red blood cell antigens can be divided into four groups A, B, AB AND O depending on the presence or absence of the corresponding antigens on the red blood cells. There are two glycoprotein A and B on the cell's surface that are responsible for the ABO types. Blood group is further classified as RH positive and RH negative.

**Barcode** : 10137974      Received : 04/Mar/2023 02:26PM  
**Ref. By** : DR VINOD BHATT      Reported : 04/Mar/2023 03:09PM  
**SRF No.** :      Panel : SJM Hospital  
**Aadhar-Nation** : - Indian      Passport No. :

Test Name	Value	Unit	Bio Ref.Interval
-----------	-------	------	------------------

**HbA1C(Glycosylated Hemoglobin ):EDTA**

Hb A1C, GLYCOSYLATED Hb ,EDTA HPLC	5.80	%	
Average Glucose Calculated	119.76	mg/dL	<125.0

**Interpretation:**

AS PER AMERICAN DIABETES ASSOCIATION (ADA)

REFERENCE GROUP	HbA1c IN %
NON DIABETIC	< 6.0 %
GOOD CONTROL	6 - 7 %
FAIR CONTROL	7 - 8 %
ACTION SUGGESTED	FOR MORE THAN 8 %

Result done on : Tosoh Automated Glycohemoglobin Analyzer.

**Comment :**

Glycosylated Hb is a normal adult Hb which is covalently bounded to a glucose molecule. Glycosylated Hb concentration is dependent on the average blood glucose concentration and is stable for the life of the RBC (120 days). Glycohaemoglobin serves as suitable marker of metabolic control of diabetics. Its estimation is unaffected by diet, insulin, exercise on day of testing and thus reflects average blood glucose levels over a period of last several weeks /months. There is a 3 - 4 week time before percent Glycohaemoglobin reflects changes in blood glucose levels.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

1. Glycosylated hemoglobin (HbA1c) test is three monthly monitoring done to assess compliance with therapeutic regimen in diabetic patients.
2. Since Hb1c reflects long term fluctuations in blood glucose concentration, a diabetic patient who has recently under good control may still have high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.
3. Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targetting a goal of < 7.0%

may not be appropriate.

4.High HbA1c (>9.0 -9.5 %) is strongly associated with risk of development and rapid progression of microvascular and nerve complications

5.Any condition that shorten RBC life span like acute blood loss, hemolytic anemia falsely lower HbA1c results.

6.HbA1c results from patients with HbSS,HbSC and HbD must be interpreted with caution , given the pathological processes including anemia,increased

red cell turnover, and transfusion requirement that adversely impact HbA1c as a marker of long-term glycemc control.

7.Specimens from patients with polycythemia or post-splenectomy may exhibit increase in HbA1c values due to a somewhat longer life span of the red cells.

PSA TOTAL ,Serum ECLIA	0.67	ng/mL	0.0 - 5.5

## Interpretation:

The major site of PSA production is the glandular epithelium of the prostate. Low levels of PSA are found in the blood as a result of leakage of PSA from the prostate gland. Increasing levels of serum PSA are associated with prostatic pathology, including prostatitis, benign prostatic hyperplasia (BPH), and cancer of the prostate. Early diagnosis of carcinoma of the prostate is hindered by the lack of symptoms in man with localized tumors therefore, early detection requires a simple, safe and inexpensive test for the disease in asymptomatic men. Several studies have shown that the measurement of serum PSA concentration offers several advantages in the early detection of prostate cancer.

Serum PSA concentrations should not be interpreted as absolute evidence for the presence or absence of prostate cancer. Elevated concentration of PSA may be observed in the serum of patients with benign prostatic hyperplasia or other nonmalignant disorders as well as in prostate cancer. The PSA value should be used in conjunction with information available from clinical evaluation and other diagnostic procedures such as DRE. Some early cases of prostate cancer will not be detected by PSA testing; the same is true for DRE. Prostatic biopsy is required for the diagnosis of cancer

\*\*\* End Of Report \*\*\*

Tests Requested: THYROID PROFILE, (TFT) SERUM, HbA1C (Glycosylated Hemoglobin); EDTA, PSA, TOTAL, Serum

## Ultrasound Report

Name: Mr.Bhanu Prakash kaushik Age: 47-- /M Date: 04/03/2023

### Ultrasound - Male Abdomen

**Liver:** Liver appears fatty infiltration of grade 1. There is no evidence of any focal lesion seen in the parenchyma. Intra-hepatic vascular and biliary radicles appear normal. Portal vein and common bile duct are normal.

**GALL BLADDER:-** Gall bladder is physiologically distended. The wall thickness is normal. There is no Evidence of any intraluminal mass lesion or calculi seen.

**PANCREAS:** -Pancreas is normal in size, shape and echo pattern. No focal mass lesion seen. Pancreatic duct is not dilated.

**SPLEEN:** -Spleen show normal size, shape and homogeneous echopattern. No focal mass lesion is seen in parenchyma.

**KIDNEYS:-** Both the kidneys size, shape, position and axis. Parenchymal echopattern is normal bilaterally. No focal solid or cystic lesion is seen. There is no evidence of renal calculi on either side

**PARAAORTIC REGIONS:** Any mass/ lymph nodes:-- no mass or lymph nodes seen.

**URINARY BLADDER:-** Adequately distended, Wall were regular and thin. Contents are Normal. No stone formation seen.

**PROSTATE:-** Normal in shape and position. Parenchymal echotexture is normal. No free ascetic fluid or pleural effusion seen.

**IMPRESSION:-** Grade 1 fatty liver.

## X-Ray Report

Patient ID.	21548 OPD	Name	MR. BHANU PRAKASH KAUSHIK	Sex/Age	M/48Y
Date	04-03-2023 11:06 AM	Ref. Physician		CHEST, CHEST	

### X-RAY CHEST PA VIEW

#### OBSERVATION:

The lung fields are clear.

Both hila are normal.

Cardiophrenic and costophrenic angles are normal.

The trachea is central.

The mediastinal and cardiac silhouette are normal.

Cardiothoracic ratio is normal.

Bones of the thoracic cage are normal.

Soft tissues of the chest wall are normal.

#### IMPRESSION:

- No significant abnormality seen.
