Patient Name	MR. NATARAJ S	Age	43Yr
Patient ID	156953	Sex	Male
Referral Dr	MEDIWHEEL	Study Date	15 Nov 2023

**X-RAY - CHEST PA VIEW**

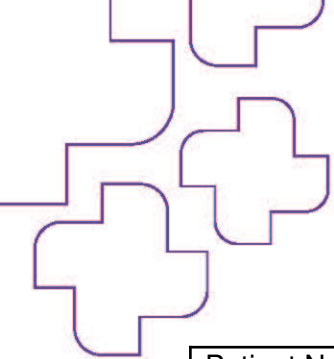

**OBSERVATION:**

The trachea is central.  
The mediastinal and cardiac silhouette are normal.  
Cardiothoracic ratio is normal.  
Cardiophrenic and costophrenic angles are normal.  
Both hila are normal.  
Lung zones are clear.  
Bones of the thoracic cage are normal.  
Soft tissues of the chest wall are normal.

**IMPRESSION:**

**No significant abnormality seen.**

Dr. Lokesh Babu., MD., (RD)  
Consultant Radiologist

Patient Name	MR.NATARAJ S	Age	43Yr
Patient ID	147170	Sex	Male
Referral Dr	MEDIWHEEL	Study Date	15 Nov 2023

### **USG REPORT - ABDOMEN AND PELVIS**

#### **LIVER:**

Is increased in size ~ 15.7 cm and shows increased echo texture.

No obvious focal lesion seen. No intra – Hepatic biliary radical dilatation seen.

#### **GALL BLADDER:**

Is adequately distended. No calculus or internal echoes are seen. Wall thickness is normal.

#### **PANCREAS:**

Appears normal in size and it shows uniform echo texture.

#### **SPLEEN:**

Is normal in size ~ 9.9 cm and shows uniform echogenicity.

#### **RIGHT KIDNEY:**

Right kidney measures ~ 9.6 x 3.8 cms.

The shape, size and contour of the right kidney appear normal.

Cortico medullary differentiation is within normal. No evidence of pelvicalyceal dilatation.

No calculi seen.

#### **LEFT KIDNEY:**

Left kidney measures ~10.8 x 5.2 cms.

The shape, size and contour of the left kidney appear normal.

Cortico medullary differentiation is within normal. No evidence of pelvicalyceal dilatation.

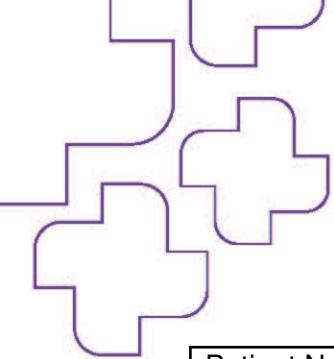

No calculi seen.

#### **URINARY BLADDER:**

Is normal contour. No intra luminal echoes are seen.

#### **PROSTATE:**

Prostate appears normal, Measures ~ 2.9 x 3.4 x 2.7cms (Vol –14.6 cc).

Patient Name	MR.NATARAJ S	Age	43Yr
Patient ID	147170	Sex	Male
Referral Dr	MEDIWHEEL	Study Date	15 Nov 2023

**RIGHT ILIAC FOSSA:**

No focal fluid collections seen.

No evidence of hernia seen in anterior abdominal wall.

**IMPRESSION:**

- **Hepatomegaly with grade II fatty liver.**
- **No significant abnormality seen in the present study.**
- **Suggested clinical correlation.**

**Sample ID** :

001431923P

Test Description	Value(s)	Unit(s)	Reference Range
------------------	----------	---------	-----------------

**PSA-Total (Prostate-specific antigen-Total)**
**PSA Profile \***

PSA (Prostate Specific Antigen)-Total	0.34	ng/mL	0 - 4.0
---------------------------------------	------	-------	---------

Method : Serum, CLIA

**Interpretation:**

1. Increased levels are noted in Prostate cancer, Benign prostatic hypertrophy, Prostatitis

PSA (Prostate-Specific antigen)-Free *	-	ng/mL	0.0 - 0.5
--	---	-------	-----------

Method : Serum, CLIA

**Interpretation & Remarks:**

- Normal results do not eliminate the possibility of prostate cancer.
- Values obtained with different assay methods or kits may be different and cannot be used interchangeably.
- Tumor markers are not specific for malignancy. Test results cannot be interpreted as absolute evidence for the presence or absence of malignant disease
- Specimens drawn from patients undergoing prostate manipulation, especially needle biopsy and transurethral resection, may show erroneously high prostatic-specific antigen (PSA) results. Care should be taken that specimens are drawn before these procedures are performed.
- The percentage of free PSA can be used to estimate how likely it is that a biopsy will show cancer.
- If the percentage of free PSA is higher than 25%, the likelihood of prostate cancer is about 8%.
- If the percentage of free PSA is less than 10%, then the likelihood of prostate cancer rises to 56%.

Free PSA / Total PSA %	-	-
------------------------	---	---

Method : Serum

**Interpretation**

- When total prostate-specific antigen (PSA) concentration is <2.0 ng/mL, the probability of prostate cancer in asymptomatic men is low, further testing and free PSA may provide little additional information. When total PSA concentration is >10.0 ng/mL, the probability of cancer is high and prostate biopsy is generally recommended.
- The total PSA range of 4.0 to 10.0 ng/mL has been described as a diagnostic "gray zone," in which the free:total PSA ratio helps to determine the relative risk of prostate cancer (see table below). Therefore, some urologists recommend using the free:total ratio

 DR.K.MURALEKAARTHIC

**Reporting Time :** Nov 15, 2023, 01:52 p.m.

**Sample ID :**

001431923P

Test Description	Value(s)	Unit(s)	Reference Range
------------------	----------	---------	-----------------

to help select which men should undergo biopsy. However even a negative result of prostate biopsy does not rule-out prostate cancer. Up to 20% of men with negative biopsy results have subsequently been found to have cancer.

Based on free:total PSA ratio: the percent probability of finding prostate cancer on a needle biopsy by age in years:

Free:total PSA ratio	50-59 years	60-69 years	> or =70 years
< or =0.10	49.2%	57.5%	64.5%
0.11-0.18	26.9%	33.9%	40.8%
0.19-0.25	18.3%	23.9%	29.7%
>0.25	9.1%	12.2%	15.8%

**Cautions**

- Normal results do not eliminate the possibility of prostate cancer.
- Values obtained with different assay methods or kits may be different and cannot be used interchangeably
- Tumor markers are not specific for malignancy. Test results cannot be interpreted as absolute evidence for the presence or absence of malignant disease.

**Interfering factors :**

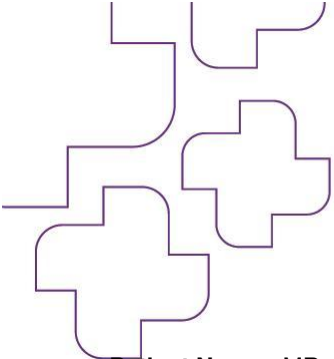

- Prostatic massage
- Proctoscopy
- Prostatic biopsy
- Prostate cancer patients receiving treatment with antiandrogens and luteinizing hormone-releasing factor agonists may exhibit markedly decreased levels of PSA. Also, men treated for benign prostatic hyperplasia with inhibitors of 5-alpha-reductase (finasteride) may demonstrate a significant reduction in PSA levels compared to values before treatment. Care should be taken in interpreting values for these individuals.
- In patients receiving therapy with high biotin doses (ie, >5 mg/day), no sample should be taken until at least 8 hours after the last biotin administration.
