What are Normal Blood Glucose Levels?

The amount of glucose ("sugar", measured in mg/dL) in your blood changes throughout the day and night.

Your levels will change depending upon when, what and how much you have eaten, and whether or you have exercised.

Normal Blood Sugars

A normal fasting (no food for eight hours) blood sugar level is between 80 and 100 mg/dL

A normal blood sugar level two hours after eating is less than 140 mg/dL

Diabetes is diagnosed by any one of the following:

Any random blood glucose that is greater than 160 mg/dL

An HbA1c test that is equal to or greater than 6.5 percent. HbA1c is an easy blood test that gives a three month average of blood sugars

A two-hour oral glucose tolerance test with any value over 160 mg/dL
