Laboratory Test Report

Name of Patient	: Mr. ADARSH DHIMOLE	Test Request ID	: 35742303250007
Age/Gender	: 32 Yrs/Male	Specimen Drawn ON	: 25-Mar-2023 12:51PM
Collected AT	: SURANASETHIA HOSPITAL AND RESE	Specimen Received ON	: 25-Mar-2023 02:35PM
Referred BY	: Dr. MEDIWHEEL	Report DATE	: 25-Mar-2023 04:06PM
Sample Type	: Serum - A3880951		
Ref Customer	:		

Test Description	Observed Value	Biological Reference Range	Method
THYROID PROFILE			
Triiodothyronine Total (T3)	1.45	0.70-2.04 ng/mL	Electrochemiluminescence immunoassay (ECLIA)
Thyroxine Total (T4)	10.8	4.6-10.5 ug/dL	Electrochemiluminescence immunoassay (ECLIA)
TSH (4th Generation)	8.634	0.40-4.20 uIU/mL	Electrochemiluminescence immunoassay (ECLIA)

se correlate clinically.

PREGNANCY	REFERENCE RANGE for TSH IN uIU/mL (As per American Thyroid Association.)
1st Trimester	0.10-2.50 uIU/mL
2nd Trimester	0.20-3.00 uIU/mL
3rd Trimester	0.30-3.00 uIU/mL

INTERPRETATION-

1. Primary hyperthyroidism is accompanied by elevated serum T3 & T4 values along with depressed TSH level.
2. Primary hypothyroidism is accompanied by depressed serum T3 and T4 values & elevated serum TSH levels.
3. Normal T4 levels accompanied by high T3 levels and low TSH are seen in patients with T3 thyrotoxicosis.
4. Normal or low T3 & high T4 levels indicate T4 thyrotoxicosis (problem is conversion of T4 to T3)
5. Normal T3 & T4 along with low TSH indicate mild / subclinical HYPERTHYROIDISM .
6. Normal T3 & low T4 along with high TSH is seen in HYPOTHYROIDISM .
7. Normal T3 & T4 levels with high TSH indicate Mild / Subclinical HYPOTHYROIDISM .
8. Slightly elevated T3 levels may be found in pregnancy and in estrogen therapy while depressed levels may be encountered in severe illness , malnutrition , renal failure and during therapy with drugs like propranolol.
9. Although elevated TSH levels are nearly always indicative of primary hypothyroidism . rarely they can result from TSH secreting pituitary tumours (secondary hyperthyroidism)

TSH IS DONE BY ULTRASENSITIVE 4th GENERATION CHEMIFLEX ASSAY

COMMENTS:

Assay results should be interpreted in context to the clinical condition and associated results of other investigations. Previous treatment with corticosteroid therapy may result in lower TSH levels while thyroid hormone levels are normal. Results are invalidated if the client has undergone a radionuclide scan within 7-14 days before the test. Abnormal thyroid test findings often found in critically ill clients should be repeated after the critical nature of the condition is resolved. The production, circulation, and disintegration of thyroid hormones are altered throughout the stages of pregnancy.

Disclaimer-

TSH is an important marker for the diagnosis of thyroid dysfunction. Recent studies have shown that the TSH distribution progressively shifts to a higher concentration with age ,and it is debatable whether this is due to a real change with age or an increasing proportion of unrecognized thyroid disease in the elderly. TSH levels are subject to circadian variation, reaching peak levels between 2-4AM and nimum between 6-10 PM. The variation is the order of 50% hence time of the day has influence on the measures serum TSH concentration. Dose and time of drug intake also influence the test result. Reference ranges are from Teitz fundamental of clinical chemistry 7th ed.

Nabl Scope.

EXAMINATION: 2D ECHOCARDIOGRAPHY

Conclusion:

1. All chambers normal sized.
2. Good LV function with LVEF = 60 %
3. All valves structurally & functionally normal.
4. No regional wall motion abnormality.
5. IAS / IVS intact.
6. No clot / vegetation / effusion.

Doppler Study:

- No diastolic dysfunction
- No TR. No PH.
- No other valvular regurgitation.
- No signs of high LVEDP.

Impression:

- Normal study.
