USG WHOLE ABDOMEN

LIVER:

Liver appears normal in size and echotexture. There is no intra-hepatic biliary radical dilatation. No evidence of any focal lesion.

GALL BLADDER:

Gall bladder is distended and appears normal. Wall thickness is within normal limits. There is no evidence of any calculus.

PORTAL VEIN:

Portal vein is normal. **CBD:** CBD is normal.

PANCREAS:

Visualised pancreas appears normal in echotexture. There is no evidence of any focal lesion or calcification. Pancreatic duct is not dilated.

KIDNEYS:

Right kidney measures 9.1 x 3.7 cm. Left kidney measures 9.8 x 4.7 cm. Both kidneys are normal in size, shape and echotexture. Corticomedullary differentiation is maintained. There is no evidence of any hydronephrosis, hydroureter or calculus.

SPLEEN:

Spleen is normal in size, shape and echotexture. No focal lesion is seen.

URINARY BLADDER:

Urinary bladder is distended and normal. Wall thickness is within normal limits.

UTERUS:

Uterus is anteverted and measures 8.2 x 3.7 x 4.4 cm. Uterine myometrium shows homogenous echotexture. Endometrial echo is in midline and measures 6.5 mm. Cervix appears normal.

OVARIES:

Both ovaries are normal.

The right ovary measures 2.1 x 1.6 cm. The left ovary measures 2.7 x 1.4 cm.

No free fluid or significant lymphadenopathy is seen.

IMPRESSION:

NO SIGNIFICANT ABNORMALITY IS DETECTED.

Investigations have their limitations. Solitary radiological investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. USG is known to have inter-observer variations. Further/follow-up imaging may be needed in some cases for confirmation / exclusion of diagnosis.
