Blood Group Report

Name of the Patient: SNEHA BANSOD

Patient Sample ID: JJ23-R02658

Reffered By Hospital: Wockhardt Super Speciality Hosp

Date & Time of Sample Receiving: 11/Mar/2023 12:07 PM

Investigation Required: Blood Group

Age: 32 Year Gender: Female

Hospital IP NO: 335505

Sample Received: EDTA/PLAIN

Adequacy of Sample: Adequacy

Date of Release of Report: 11/Mar/2023 12:32 PM

Report

Forward Red Cell Blood Group: A

Reverse Serum Blood Group: A

Rh Typing: Rh Positive

Final Blood Group: A Rh Positive

Opinion: If there is any Blood group discrepancy, it may be because of the irregular antibody present in the blood. This requires

proper evaluation of Antibody Identification and Rh Phenotyping.

Remark:

Principle of the Test:

As the Matrix gel card containing red blood cells is centrifuged under specific conditions, the red blood cells sensitized with antibody will agglutinate in the presence of the Anti- Human Globulin reagent in the gel matrix and will be trapped in the gel column. The red blood cells, which do not react are not trapped in the gel matrix and are pelleted at the bottom of the column.

The reactions are then read and graded according to their reactivity pattern.

End of Report

CHEST X-RAY PA VIEW :

Both lung fields are clear.

The costophrenic angles and domes of diaphragm appear normal.

No hilar or mediastinal lesion seen.

Cardiac silhouette is within normal limits.

Visualised bony thorax and soft tissues appear normal.

Impression:

Normal Chest X-Ray.

USG ABDOMEN WITH PELVIS

Real time sonography of the abdomen and pelvis was performed .

The liver is normal in size and echotexture. No focal parenchymal lesion noted.

Intrahepatic biliary tree and venous radicles are normal.

The portal vein and CBD appear normal in course and calibre.

e gall bladder is normal in size with a normal wall thickness and there are no calculi noted within.

The pancreas is normal in size and echotexture. No evidence of focal lesion or calcification or duct dilatation seen.

The spleen is normal in size and echotexture.

Both kidneys are normal in size, position and echogenecity.

Cortical thickness and corticomedullary differentiation are normal.

No hydronephrosis or calculi noted.

The bladder is normal in contour, capacity and wall thickness.

No vesical calculi noted.

The uterus is normal in size and anteverted in position.

Myometrial echotexture is homogenous. No focal lesions seen.

Endometrial echocomplex is central in position and 8 mm in thickness.

Both ovaries are normal in size and echogenecity.

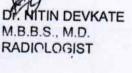

No adnexal mass lesion seen.

There is no evidence of free fluid in pouch of Douglas.

There is no evidence of ascites.

Impression:

No significant abnormality noted on this study.
