Guidelines for Total Blood Cholesterol Levels on 11 to 12 hour fasting samples

Desirable: Less than 200 mg/dl  
 Borderline High Risk: 200 to 239 mg/dl  
 High Risk: 240 mg/dl and over, on repeated values  
 Optimal Level for Cardiac Patients: Less than 200 mg/dl

**HDL-C**: High HDL has generally been found to be protective, decreasing the risk of coronary Artery disease (CAD) in most people. However, some recent studies have shown that in some people with high HDL, the HDL is not protective and may, in fact result in higher risk for CAD than in people with normal HDL levels. In one study it was shown that people with CAD and high HDL had underlying genetic anomalies in enzymes important in lipid turnover. Another study showed that high levels of abnormally large HDL particles were associated with increased risk of CAD. Factors that elevate HDL concentrations include chronic alcoholism, treatment with oral estrogen replacement therapy, extensive aerobic exercise, and treatment with niacin, statins, or fibrates. Smoking reduces levels of HDL cholesterol, while quitting smoking leads to a rise in the plasma HDL level.

Triglycerides  
 Female 40 - 140  
 Male 60 - 165

Adult levels  
 Optimal <100 mg/dl  
 Near Optimal/ above optimal 100 -129 mg/dL

Iron is transported as Fe (III) bound to the plasma protein apotransferrin. The apotransferrin-Fe(III) complex is called transferrin. Normally only about one third of the iron-binding sites of transferrin are occupied by Fe(III). The additional amount of iron that can be bound is the unsaturated (or latent) iron-binding capacity (UIBC). The sum of the serum iron and UIBC represents total iron-binding capacity (TIBC). TIBC is a measurement for the maximum iron concentration that transferrin can bind.

Triiodothyronine (T3)	1.53	ng/ml	0.50 - 2.00
Thyroxin (T4)	7.40	ug/dl	4.40 - 11.60
Thyroid Stimulating Hormone (TSH)	1.32	uIU/mL	0.39 - 6.16

**Comments :**

The levels of thyroid hormone (T3&T4) are low in case of primary secondary and tertiary hypothyroidism and sometimes in nonthyroidal illness also. Increased levels are found in grave-s disease, hyperthyroidism and thyroid hormone resistance. T3 levels are also raised in T3 thyrotoxicosis. TSH levels are raised in primary hypothyroidism and are low in hyperthyroidism and secondary
