THYROID FUNCTION TEST

INVESTIGATION	OBSERVED VALUE	UNITS	REFERENCE RANGE
TSH	2.90	μ IU/ml	0.25-5 μ IU/ml
T3	2.16	nmol/l	0.92-2.33 nmol/l
T4	79.03	nmol/l	60-120 nmol/l

PRINCIPLE

The assay principle combines an enzyme immunoassay competition method with a final fluorescent detection (ELFA).

INTERPRETATION

TSH : A high TSH result often means an under active thyroid gland that is not responding adequately to the stimulation of TSH due to some type of acute or chronic thyroid dysfunction. A high TSH value can also occur when someone with a known thyroid disorder or who has had their thyroid gland removed is receiving too little thyroid hormone medication. A low TSH result can indicate an over active thyroid gland (hyperthyroidism) or excessive amounts of thyroid hormone medication in those who are being treated for an under active (or removed) thyroid gland. An abnormal TSH test result is usually followed by additional testing to investigate the cause of the increase or decrease.

T3: Triiodothyronine T3 contributes significantly to the maintenance of the euthyroid state, and the total T3 concentration has a role in screening for thyroid disease in conjunction with other tests. T3 alone cannot diagnose hypothyroidism, but it may be more sensitive than thyroxine (T4) for hyperthyroidism.

T4 :Thyroxine accounts for at least 90% of circulating protein-bound iodine. While >99.9% of T4 is protein-bound, primarily to thyroglobulin-binding globulin(TBG), it is the free fraction that is biologically active. In most patients the total T4 level is a good indicator of thyroid status, however it can sometimes be inadequate, and diagnostic efficiency may be improved by use of a total T4 test in conjunction with other tests.

The patient exercised according to the BRUCE for 12:25 min:s, achieving a work level of Max. METS: 14.90. The resting heart rate of 83 bpm rose to a maximal heart rate of 169 bpm. This value represents 89 % of the maximal, age-predicted heart rate. The resting blood pressure of 140/90 mmHg, rose to a maximum blood pressure of 160/90 mmHg. The exercise test was stopped due to Target heart rate achieved.

Interpretation

Summary: Resting ECG: normal.
Functional Capacity: normal.
HR Response to Exercise: appropriate.
BP Response to Exercise: normal resting BP - appropriate response.
Chest Pain: none.
Arrhythmias: none.
ST Changes: none.
Overall impression: Normal stress test.
