MPV (Calculated)	10.8	%	7.5-11.5
NLR	1.14		1-3

6-9 Mild stres
7-9 Pathological cause

-NLR is a reflection of physiologic stress,perhaps tied most directly to cortisol and catecholamine levels.
-NLR can be a useful tool to sort out patients who are sicker, compared to those who are less sick (its not specific to infection).
-NLR has proven more useful than white blood cell count (WBC) when the two are directly compared. Ultimately, NLR may be a logical replacement for the WBC. In some situations, NLR is competitive with more expensive biomarkers (e.g. procalcitonin,lactate).
-With specific clinical contexts (e.g. pancreatitis, pulmonary embolism), NLR may have surprisingly good prognostic value.

Sample By	:			**Centre Name**	: **Garg Pathology Lab - TPA**
Organization	:				

Investigation	Results	Units	Biological Ref-Interval
GLYCATED HAEMOGLOBIN (HbA1c)*	5.0	%	4.3-6.3
ESTIMATED AVERAGE GLUCOSE	96.8	mg/dl	

EXPECTED RESULTS :

Non diabetic patients & Stabilized diabetics : 4.3% to 6.30%
Good Control of diabetes : 6.4% to 7.5%
Fair Control of diabetes : 7.5% to 9.0%
Poor Control of diabetes : 9.0 % and above

-Next due date for HBA1C test : After 3 months
-High HbF & Trig.level, iron def.anaemia result in high GHb
-Haemolyic anemia, presence of HbS, HbC and other Haemoglobinopathies may produce low values. three months.

INTERPRETATION: HbA1c is an indicator of glycemic control.HbA1c represents average glycemia over the past six to eight weeks.Glycation of hemoglobin occurs over the entire 120 day life span of the red blood cell, but with in this 120 days. Recent glycemia has the largest influence on the HbA1c value. Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months two to four. Mean Plasma Glucose mg/dl = (HbA1c x 35.6) - 77.3) Correlation between HbA1c and Mean Plasma Glucose (MPG) is not "perfect" but rather only this means that to predict or estimate average glucose from Hb-A1c or vice-versa is not "perfect" but gives a good working ballpark estimate. Afternoon and evening results correlate more closely to HbA1c than morning results, perhaps because morning fasting glucose levels vary much more than daytime glucose levels, which are easier to predict and control.
As per IFCC recommendations 2007, HbA1c being reported as above maintaining traceability to both IFCC (mmol/mol) & NGSP (%) units.

Investigation	Results	Units	Biological Ref-Interval
THYRIOD PROFILE*			
Triiodothyronine (T3) * (ECLIA)	1.471	ng/dl	0.79-1.58
Thyroxine (T4) * (ECLIA)	8.965	ug/dl	4.9-11.0
THYROID STIMULATING HORMONE (TSH) (ECLIA)	0.920	uIU/ml	0.38-5.30

Normal Range:-
1 TO 4 DAYS 2.7-26.5
4 TO 30 DAYS 1.2-13.1

Hyperthyroid patient have suppressed TSH values, with the exception of those few individuals whos have hyperthyroidism caused by TSH producing pituitary tumor or other rare disordes such as pituitary resistance to thyroid hormones. Subclinical hyperthyroidism is defined as low TSH with levels of T4 and T3 within the reference interval. In most patients with hypothyroidism,serum TSH results are markedly elevated, but results are low in individuals with hypothyroidism caused by pituitary or hypothalamic disorders. An important cause of both incresed and decreased TSH results is NTI. Patients with NTI tend to have low TSH results during their acute illness ,then TSH rises to within or above the reference range with resolution of the underlying illness,and finally returns to within the reference range. The situation is complicated because drugs,including glucagon and dopamine,suppress TSH . Sensitive TSH assays are helpful in evaluation of treatment with thyroid hormone both for replacement therapy and suppressive doses for malignant thyroid disease.

CYTOLOGY EXAMINATION

SPECIMEN MG 216/23

Microscopic:

SITE OF SMEAR: ECTOCERVIX AND POSTERIOR FORNIX OF VAGINA
METHOD OF EVALUATION: BETHSEDA SYSTEM
EVALUATION OF SMEAR : SATISFACTORY
REPORT: CELLULAR SPREAD SHOWS DESQUAMATED EPITHELIAL CELLS PREDOMINANTLY SUPERFICIAL AND INTERMEDIATE CELLS. FEW ENDOCERVICAL CELLS SHOWING REACTIVE CHANGES ARE SEEN.
BACKROUND SHOWS SEVERE INFLAMMATORY REACTION. THERE IS SHIFT IN VAGINAL FLORA. LACTOBACILLI ARE REDUCED.
ANY DYSKARYOTIC CELL IS NOT SEEN. ANY BUDDING SPORES OR TROPHOZOITE IS NOT SEEN.
INFERENCE: NEGATIVE FOR INTRAEPITHELIAL LESSION OR MALIGNANCY
INFLAMMATORY SMEARS(BACTERIAL VAGINOSIS)
NOTE: This test has its own limitations. Please interpret the findings in light of clinical picture. not for medicolegal use

REPORT

Liver – appears normal in size and echotexture. No mass lesion seen. Portal vein is normal.

Gall bladder – Wall thickness is normal. No calculus / mass lesion seen. CBD is normal.

Pancreas- appears normal in size and echotexture. No mass lesion seen.

Spleen- is normal in size and echotexture.

Right Kidney - Normal in size and echotexture. Show well maintained corticomedullary differentiation. No calculus / hydronephrosis is noted.

Left Kidney – Normal in size and echotexture. Show well maintained corticomedullary differentiation. No calculus / hydronephrosis is noted.

Urinary bladder – appears distended. Wall thickness is normal. No calculus / mass seen

Uterus - Normal in size shape & normal in echotexture. Endometrium appears normal. Myometrium appears normal.

Ovaries and adnexa are unremarkable.

IMPRESSION

Essentially normal study

Dr. P.D. Sharma

MORPHOLOGICAL DATA :

Mitral Valve: AML	: *Normal*	*Interatrial septum*	: *Intact*
PML	: *Normal*	*Interventricular Septum*	: *Intact*
Aortic Valve	: *Thickened*	*Pulmonary Artery*	: *Normal*
Tricuspid Valve	: *Normal*	*Aorta*	: *Normal*
Pulmonary Valve	: *Normal*	*Right Atrium*	: *Normal*
Right Ventricle	: *Normal*	*Left Atrium*	: *Normal*
Left Ventricle	: *Normal*		

Cont. Page No. 2

2-D ECHOCARDIOGRAPHY FINDINGS :

LV normal in size with normal contractions. No LV regional wall motion abnormality seen. RV normal in size with adequate contractions. LA and RA normal. Aortic valve is thickened and rest other cardiac valves are structurally normal. No chamber hypertrophy/intracardiac mass. Estimated LV ejection fraction is 60%.

DOPPLER STUDIES :

Valve	Regurgitation	Velocity m/sec	Gradient mmHg
Mitral Valve	Mild	0.89	2.9
Tricuspid Valve	Moderate	2.4	24.0
Pulmonary Valve	No	0.72	2.0
Aortic Valve	No	1.0	4.4

IMPRESSION :

- ***No RWMA.***
- ***Normal LV Systolic Function (LVEF = 60%).***
- ***Mild MR, Moderate TR, Mild PAH.***

REPORT

- Trachea is central in position.
- Bilateral lung field show normal broncho vascular markings.
- **Bilateral hila are mildly prominent.**
- Cardiac size is within normal limits.
- Both costophrenic angles are clear.
- Both domes of diaphragm are normal in contour and position.

IMPRESSION

Normal study

Consultant Radiologist and Head

1. Impression is a professional opinion & not a diagnosis
2. All modern machines & procedures have their limitations. if there is variance clinically this examination may be repeated or reevaluated by other investigations
   Ps. All congenital anomalies are not picked upon ultrasounds.
3. Suspected typing errors should be informed back for correction immediately.
4. Not for medico-legal purpose. Identity of the patient cannot be verified.
