Test	Result	Unit	Biological Reference Interval
HBA1C			
HbA1c (Turbidimetric Inhibition Immunoassay)	6.44 H	%	Both: Non Diabetic : < 5.6 Both: Pre Diabetic: 5.7-6.4 Both: Diabetic: => 6.5
Estimated Average Glucose (Turbidimetric Inhibition Immunoassay)	138.13	-	-

Interpretation:

- HbA1C above 6.5% can be used to diagnose diabetes provided the patient has symptoms. If the patient does not have symptoms with HbA1C>6.5%, repeat measurement on further sample. If the repeat test result is <6.5%, consider as diabetes high risk and repeat measurement after 6 months.
- HbA1C measurement is not appropriate in diagnosing diabetes in children, suspicion of type 1 diabetes, symptoms of diabetes for less than 2 months, pregnancy, hemoglobinopathies, medications that may result sudden increase in glucose, anemia, renal failure, HIV infection, malignancies, severe chronic hepatic, and renal disease.
- Any sample with >15% should be suspected of having a haemoglobin variant.
