- Thyroid function test is imperative to diagnose level of defect in thyroid dysfunction; primary/secondary or tertiary hypo or hyperthyroidism can be categorized leading to medical or surgical management accordingly.
- Mild elevation of TSH may be found in patients with subclinical hypothyroidism or non thyroidal illness.
- Significant elevation in TSH suggests inadequate thyroid hormone replacement if the dose has not been changed for at least six weeks and the patient has been taking medicines regularly.
- Thyroid antibody testing can be useful in subclinical hypothyroidism.
