Reg Date/Time : 04-11-2022 05:06pm

Sample Coll.Date/Time : 04-11-2022 05:06pm

Report Date/Time : 04-11-2022 05:54pm

### T3 (TOTAL), T4 (TOTAL) & TSH

Investigation	Result	Units	Reference Range
T3 (Total), Serum (Method: CLIA)	: 0.96	ng/mL	0.70 - 2.04
T4 (Total), Serum (Method: CLIA)	: 6.97	ug/dL	5.5 - 12.5
Ultra TSH, Serum (Method: ECLIA/CLIA)	: 2.734	uIU/mL	0.35 - 5.5

#### NOTE :

- 1) The TSH levels are subject to diurnal/circadian variation, reaching to peak levels between 2-4 a.m. and at a minimum between 6-10 p.m. The variation is to the order of 50%, hence the time when sample is collected has influence on the levels of TSH.
- 2) Many substances produced in central nervous system, even in healthy euthyroid individuals, may enhance or suppress TSH production in addition to the feedback effect of thyroid hormone.
- 3) Further more although TSH levels rise and fall in response to changes in the concentration of Free T4, individuals appear to have their own setpoints and factor such as race and age also contribute to variability in TSH levels.
- 4) Alterations of normal pituitary response are also common in patients with a variety of illnesses which can affect the levels of TSH.
- 5) Inter-assay variations are possible on different immunoassay platforms.

#### CLINICAL USE:

- 1) Diagnose Hypothyroidism and Hyperthyroidism.
- 2) Monitor T4 replacement or T4 suppressive therapy.
- 3) Quantify TSH levels in the subnormal range.
- 4) Increased levels of TSH are found in Primary hypothyroidism, Subclinical hypothyroidism, TSH dependent Hyperthyroidism, Thyroid hormone resistance.
- 5) Decreased levels of TSH are found in Grave's disease, Autoimmune thyroid hormone secretion, TSH deficiency.

(R = Rechecked, H = High, L = Low.)

### PSA (PROSTATE SPECIFIC ANTIGEN)

Investigation	Result	Units	Reference Range
PSA - Prostate Sepsific Antigen (Total) (Serum, CLIA)	: 1.290	ng/mL	<40 yrs:<=2.0 40-49 yrs:<=2.50 50-59 yrs:<=3.5 60-69yrs:<=4.5 70-79 yrs:<=6.5 >=80 yrs:<=7.2 Mayo Clinical Laboratories.

#### INTERPRETATION:

PSA is a glycoprotein produced by prostate gland.

Useful in:

- 1) Assessing risk of prostate cancer.
- 2) Monitoring patients with history of prostate cancer.
- 3) Early indicator of recurrence and response to treatment.

Higher total PSA levels and lower percentage of Free PSA are associated with higher risk of prostate cancer.

The total PSA in the range of 4 to 10 ng/ml has been described as a diagnostic gray zone.

The Free PSA:Total PSA ratio helps to determine the relative risk of prostatic cancer.

#### NOTE:

- 1) Normal PSA values do not eliminate possibility of prostate cancer.
- 2) Benign prostatic hyperplasia(BPH), prostatitis, prostatic infarct may increase circulating PSA levels.
- 3) Specimen drawn from patients undergoing prostate manipulation, biopsy, TURP may show false elevation.
- 4) Patients on treatment for prostatic cancer may exhibit markedly decreased levels.

Patient Name: Mr. Prashant Kavi

Age: 48 yrs/ Male.

Ref By:

Date: 4-Nov-22

## ULTRASOUND EXAMINATION OF ABDOMEN AND PELVIS

Liver is normal in size and shows normal echotexture. No focal mass. Hepatic and portal veins are normal.

Gall Bladder is well distended. Walls are thin. **Two calculi of 8-9 mm seen in GB. No pericholecystic fluid/inflammation.**

CBD is unremarkable. No intrahepatic biliary dilatation

Pancreatic head appears normal. Body and tail of pancreas obscured by gas shadow.

Spleen is normal in size and texture.

Both kidneys are normal in size and texture. Corticomedullary differentiation is intact. No hydronephrosis or calculus seen on either side.

RK: 9.8 cm

LK: 9.6 cm

Visualized bowel loops are normal in calibre and peristalsis.  
No ascites. No obvious enlarged nodes.

Urinary Bladder is distended. Its walls are thin. No intrinsic pathology seen.

Prostate is normal in size and texture.

### Impression:

**Cholelithiasis.**

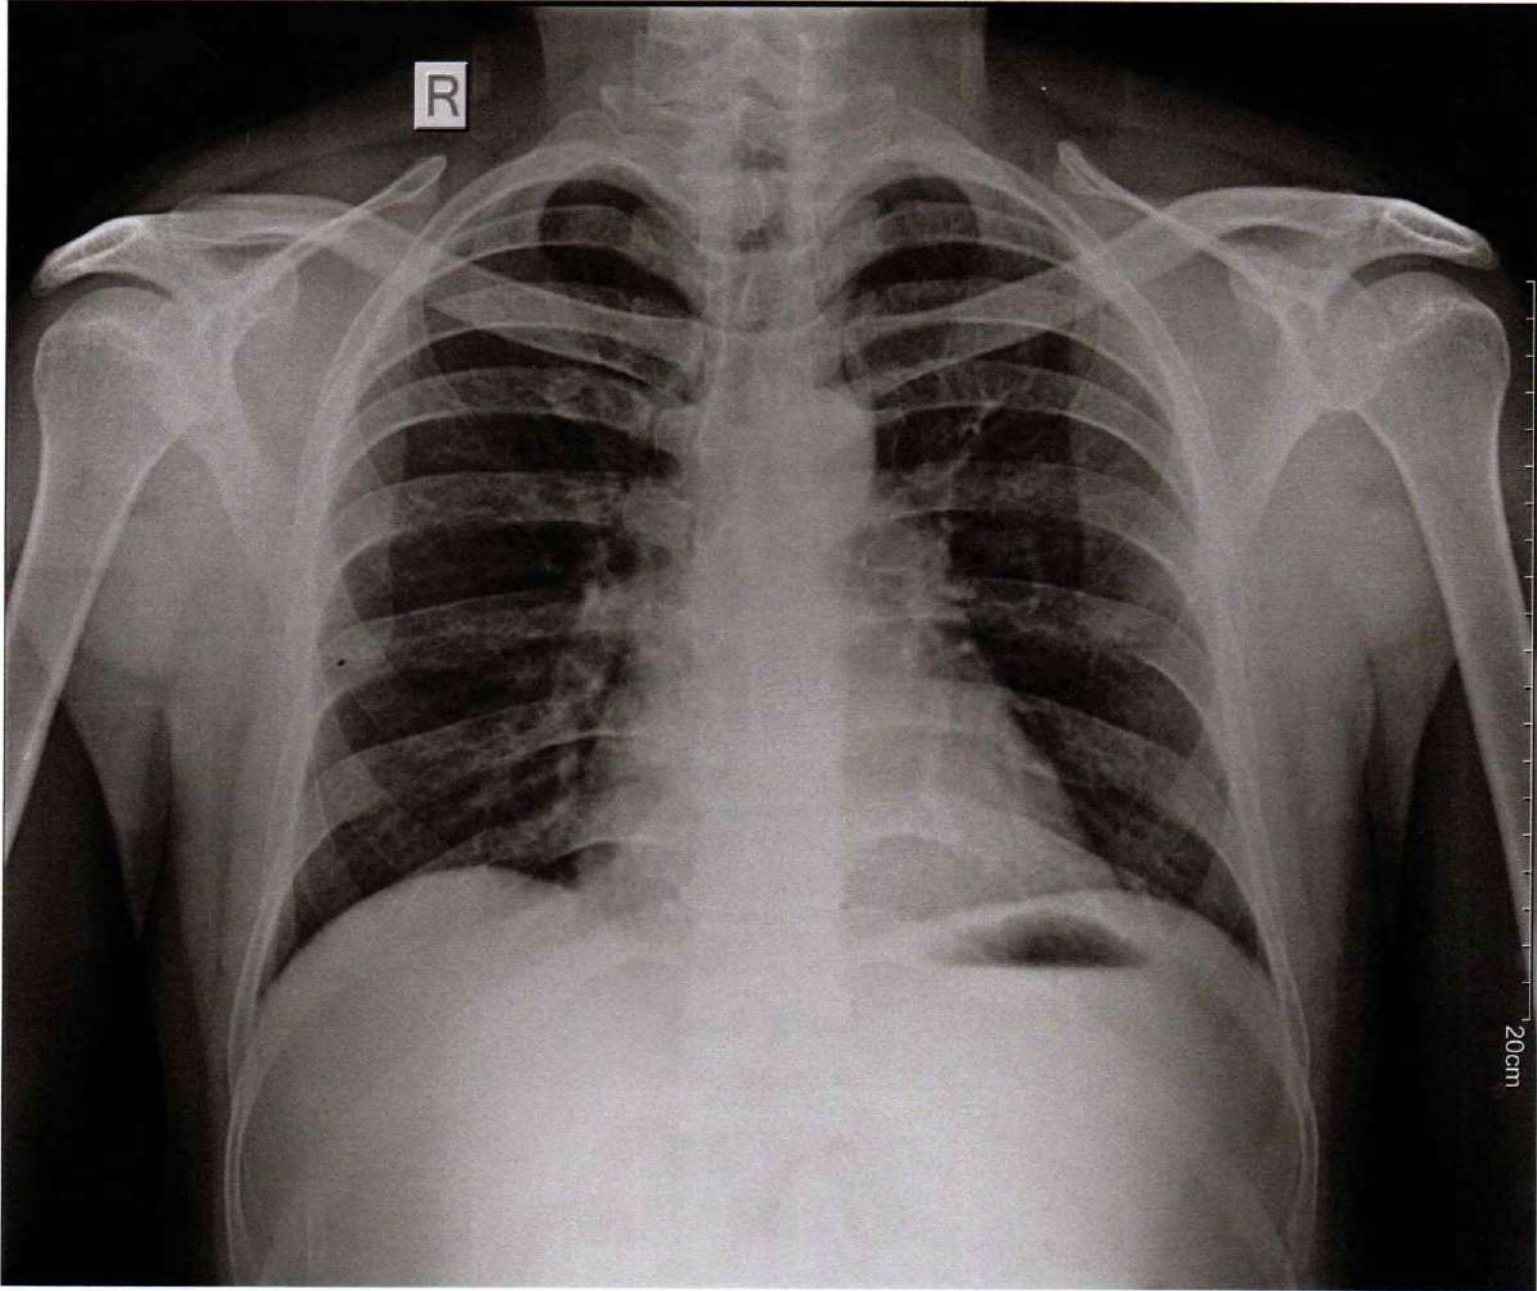

**No other significant abnormality in abdomen and pelvis.**
