 Report Status : F/nal
 Registration Date/Time : 14/01/2023 10:13AM
 Accession Date/Time : 14/01/2023 01:30PM
 Report Date/Time : 14/01/2023 05:15PM
 Print Date/Time : 14/01/2023 5:16 pm

TEST(S)	RESULT(S)	UNITS	BIOLOGICAL REFERENCE RANGE
HbA1C SAMPLE TYPE: WHOLE BLOOD EDTA M METHOD: immunoturbidimet			
Glycosylated Haemoglobin % (HbA1c)	6.53	%	4.8-5.9
Mean Plasma Glucose (MPG)	140.7		

TES: 1. The HbA1c test shows your average blood sugar for last 3 months.
 2. The HbA1c test does not replace your day-to-day monitoring of blood glucose.

Use this test result along with your daily test results to measure your overall, diabetes control. How does HbA1c work?

HbA1c test measures the amount of sugar that attaches to protein in your red blood cells. As red blood cells live for about 3 months, so this test shows your average blood sugar levels during that time. Higher the level of sugar & longer it is high, the more sugar that will attach to RBCs. Why is this test so important?

Research studies demonstrated that the closer to normal your HbA1c level was, the less likely your risk of developing the long-term complications of diabetes. Such problems include eye disease, nerve damage, heart and blood vessel disease and kidney problems.

When should you have the HbA1c test done?

Anyone with diabetes can benefit from taking this test. Knowing your HbA1c level helps you and your doctor decide if you need to change your diabetes management plan.

How often should you have a HbA1c test?

You should have this test done when you are first diagnosed with diabetes.

You should have this test done at least twice a year if your treatment goals are being met & blood glucose control is stable.

More frequent HbA1c testing (4 times / year) is recommended if your therapy has been recently changed or if you are not

Test Name With Methodology
Thyroid Profile-I [T3,T4,TSH]

.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref.Interval
(Trilodothyronine) Electro Chemi Luminescent Immune Assay	133		
(Thyroxine) Electro Chemi Luminescent Immune Assay	7.78	ng/dl	60-181
TSH (Ultrasensitive) Electro Chemi Luminescent Immune Assay	1.32	ug/dl	4.5-12.6
Units:		uIU/mL	0.13-6.33

Our reference range applies the central 95th interval (2.5th - 97.5th quartile) according to the CLSI/WCC guidelines EP28-A3c. A circadian variation in serum TSH in healthy subjects is well documented. TSH level is reaching peak levels between 2-4 am and at a minimum between 6-10 pm. The variation is of the order of 50%, hence time of the day has influence on the value of TSH. TSH levels between 6.3 and 15.0 may represent subclinical or compensated hypothyroidism or show considerable physiological & seasonal variation, suggest clinical correlation or repeat testing with fresh sample. TSH levels may be transiently altered because of non-thyroid illness, like severe infection, renal disease, liver disease, heart disease, severe burns, trauma, surgery etc. Few drugs also altered the TSH values. A high TSH result often means an underactive thyroid gland caused by failure of the gland (hypothyroidism). A low TSH result can indicate an overactive thyroid gland (hyperthyroidism) or damage to the pituitary gland that prevents it from producing TSH. Resistance to thyroid hormone (RTH) and central hyperthyroidism (TSH-oma) are rare conditions associated with elevated TSH, T4 and T3 levels.

mentioned are the guidelines for age reference ranges for T3, T4 and TSH results:

	Total T3 (ng/dl)	Total T4 (µg/dl)	TSH (uIU/ml)
ns	73 - 298	5.04 - 18.5	0.7 - 15.0
3 months	80 - 275	5.41 - 17.0	0.72 - 11.0
6 months	90 - 265	5.67 - 16.0	0.73 - 8.30
1yr	102 - 248	5.95 - 14.7	0.70 - 6.97
1.5yr	113 - 231	5.99 - 13.8	0.50 - 6.04
2yr	111 - 218	5.91 - 13.2	0.51 - 6.50
3yr	100 - 181	4.90 - 12.6	0.13 - 6.33
1st trimester in pregnancy	0.10 - 2.5 uIU/ml		
2nd trimester	0.20 - 3.0 uIU/ml		
3rd trimester	0.30 - 3.0 uIU/ml
