### INTERPRETATION :

#### Expected Values :

|     |   |                                 |                 |
|-----|---|---------------------------------|-----------------|
| 99% | : | of Healthy males                | 0.0-4.0 ng/ml   |
| 80% | : | of Benign prostatic hypertrophy | 0.0-4.0 ng/ml   |
| 81% | : | of Prostatic Carcinomas         | Above 4.0 ng/ml |

**PSA** is reliable tumour marker for already diagnosed prostatic carcinomas. It is uniquely associated only with prostatic tissue, and therefore is specific for it. Baseline levels measured prior to therapeutic intervention and followed later by serial periodical measurements will predict the outcome of therapy. It also helps in early discovery of recurrences, relapses and metastases.
