### Thyroid Profile-I (T3, T4, TSH)

T3 ,Serum Method:CLIA T4 ,Serum

Method:CLIA TSH, Serum Method:CLIA

129.00

8.70

3.90

ug/dL

uIU/mL

ng/dL

60-181

4.5-12.6

0.13-6.33

#### Comments:

The usual blood test done for thyroid function are TSH, T4 and rarely T3. A blood sample is taken from vein. Usually the free or active portion of T3 and T4 is measured. In pregnancy the serum TSH reference range is different from the general population and should ideally be based on reference ranges derived from healthy pregnant women in the same population.

#### Reference Range

Age	Total T3 (ng/dl)	Total T4 ( μg/dl)	TSH (µlU/ml)
1 - 6 days	73 - 288	5.04 - 18.5	0.7 - 15.0
6 days -3 months	80 - 275	5.41 - 17.0	0.72 - 11.0
4 - 12 months	86 - 265	5.67 - 16.0	0.73 - 8.35
1 - 6 years	92 - 248	5.95 - 14.7	0.70 - 5.97
7 - 11 years	93 - 231	5.99 - 13.8	0.60 - 5.84
12 - 20 years	91 - 218	5.91 - 13.2	0.51 - 6.50
>20 years	60 - 181	4.50 - 12.6	0.13 - 6.33

TSH levels are subject to circardian variation, reaching peak levels between 2-4 AM and min between 6-10 PM. The variation is the order of 50% hence time of the day has influence on the measures serum TSH concentration. Dose and time of drug intake also influence the test results.

#### INTERPRETATIONS:

- 1.If the TSH level is high and the T4 result is low this suggests an underactive thyroid (hypothyroidism) that requires treatment.
- 2.If the TSH level is low and the T4 result is high this suggests an overactive thyroid (hyperthyroidism) that requires treatment.
  3.If the TSH level is slightly raised but the T4 level is still within the normal reference range this is called subclinical hypothyroidism or mild thyroid failure.
- 4.A low TSH with a low T4 may be a result of a failure of the pituitary gland (secondary hypothyroidism caused by hypopituitarism) or a response to a significant non-thyroid illness.

\*\*\* End Of Report \*\*\*

DR. SONALI MD, PATH CONSULTANT PATHOLOGIST

# **Labcure Diagnostic Private Limited**

### **CONDITIONS OF REPORTING:**

- It is presumed that the specimen belongs to the patients, named or identified in the test requisition form.
- The quality of result depends on the specimen received from the patient.
- All lab Reprots/related information are subject to clinical interpretation through qualified medical professionals.
- Lab Results must be interpreted with clinical judgement, in conjunct with clinical presentation, history and other relevant investigations.
- Test results depend upon quality of sample as well as assary procedures and may very from lab to lab and also from Time to time for the same parameters for the same patient.
- If the result of received sample is unstable, then a repeat investigation may be entertained with 72 hrs from the time to testing on request of Client/Doctors.
- There may be circumstances beyond our control that might delay test results.
- This Report is not valid for Medico-Legal Purpose.
- We have our out source partners to provide wide range of lab investigations.
- For information related to corporate discounts patients should contact lab customer care Number.

### **USG WHOLE ABDOMEN**

### Screening:

LIVER is normal in size (125 mm) and echotexture. No evidence of any focal lesion or IHBR dilation is present. Portal and hepatic veins are normal in caliber at porta.

GALL BLADDER is well distended and lumen is echofree. Wall thickness is normal. No pericholecystic fluid is seen.

CBD is normal in course and caliber. No evidence of intraluminal calculus seen in visualized segments.

SPLEEN is normal in size (72 mm) and echotexture. No focal lesion is seen.

PANCREAS is normal in size and echotexture. Peripancreatic fat planes are clear. MPD is not dilated.

RIGHT KIDNEY is normal in size (91x33 mm) and position and outline. Corticomedullary differentiation is maintained. There is no evidence of any focal lesion / calculus / backpressure changes.

LEFT KIDNEY is normal in size (91x47 mm) and position and outline. Corticomedullary differentiation is maintained. There is no evidence of any focal lesion / calculus / backpressure changes.

URINARY BLADDER is well distended and lumen is echofree. Wall thickness is normal. No evidence of any focal lesion.

**UTERUS** is anteverted in position and normal in size (35x75x81 mm). Myometrial echotexture is normal. Endometrial thickness is within normal limits (8.5 mm). A small nabothian cyst measuring ~ 8x5 mm is seen in cervix.

**OVARIES:** Both ovaries are normal in size and echotexture. Right ovary measures  $\sim 34x14mm$  Left ovary measures  $\sim 31x20$  mm.

Left adnexa shows small simple cyst measuring ~ 18x15 mm, abutting left ovary - ? para ovarian cyst - ?? ovarian unruptured follicle.

No evidence of any adnexal lesion on right side. Cul de Sac is clear.

To be correlate clinically
