MRNO : FGUN.0000017692  
 Patient Name : Mr. GOPU MAHESH  
 Sex / Age : Male / 32 Y  
 Address :

Date : 01-04-2023  
 Department : General  
 Consultant :  
 Mobile No : +918185094262

Pulse : 81bbr	B.P : 120/80mmHg	Resp : 20bbr	Temp : 98.6F
Weight : 83kgs	Height : 165cm	BMI : 30.5	Waist Circum : 97cm

Chief Complaints : came for General checkup.

Past History : No significant Past history.

General and Systemic Examination : NAD

Diagnosis and Final Impression : -

O/E's -  
 RS: B/L air entry @ & equal  
 CVS: S<sub>1</sub>, S<sub>2</sub> heard  
 No murmurs.

Treatment, Recommendation and Investigations : -

Adv. -  
 Regular Exercise  
 Plenty of Oral fluids

Follow Up :

Dr. A. Yamuna Gayathri  
 1/4/23

Dr. A. Yamuna Gayathri

Doctor Signature With Date :

General Physic

Post Graduat

Dr. A. Yamuna Gayathri

**DEPARTMENT OF CLINICAL BIOCHEMISTRY**

TEST NAME	RESULTS	UNITS	BIO.REFERENCE INTERVAL
<b>Glycosylated Hemoglobin (HbA1c):</b>			
Glycosylated Hemoglobin (HbA1c):	5.4	%	< 6.0% : Non Diabetic 6.0 - 7.0% : Good Control 7.0 - 8.0% : Average Control 8.0 - 9.0% : Poor Control >9.0% : Very poor control
Mean Blood Glucose	108.3	mg/dL	

**INTERPRETATION:** HbA1c is an indicator of glycemic control. HbA1c represents average glycemia over the past six to eight weeks. Glycation of hemoglobin occurs over the entire 120 day life span of the red blood cell, but within this 120 days. Recent glycemia has the largest influence on the HbA1c value. Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months two to four.

Mean Plasma Glucose mg/dl =  $(\text{HbA1c} \times 28.7) - 46.7$  Correlation between HbA1c and Mean Plasma Glucose (MPG) is not "perfect" but rather only this means that to predict or estimate average glucose from Hb-A1c or vice-versa is not "perfect" but gives a good working ballpark estimate. Afternoon and evening results correlate more closely to HbA1c than morning results, perhaps because morning fasting glucose levels vary much more than daytime glucose levels, which are easier to predict and control.

As per IFCC recommendations 2007, HbA1c being reported as above maintaining traceability to both IFCC (mmol/mol) & NGSP (%) units..

### USG ABDOMEN

Real time grey scale B-Mode transabdominal ultrasonography performed with 3.5 MHz transducer.

- LIVER** : Normal in size and shows increased parenchymal echotexture. No focal lesions. No IHBRD. Portal vein appears normal. CBD within normal limits.
- GALL BLADDER** : Partially distended. No obvious calculi to the extent visualised. No wall thickening.
- SPLEEN** : Normal in size and echotexture. No focal lesions.
- PANCREAS** : Visualized portion of head and body appears normal.
- KIDNEYS** : RK: Normal in size and echogenicity. No focal lesions. No calculi. No hydronephrosis. CMD well maintained.  
LK: Normal in size and echogenicity. No focal lesions. No calculi. No hydronephrosis. CMD well maintained.
- URINARY BLADDER** : Partially distended. No obvious wall thickening / focal masses. No calculi.
- PROSTATE** : Normal in size and echotexture.

Paraaortic regions appear normal

No pleural effusion / No ascites.

### IMPRESSION:

- **Grade I fatty changes in liver.** ✓

Suggested clinical correlation for further evaluation.

NB: This report is only as given furnished only on the present basis & while sharing findings, which may be variable in identification significance with time & little inter-observer variability & also depending upon disease dynamics. Hence optimal needs clinical correlation with other investigations, follow up & if necessary second opinion. Hence this report cannot be subjected to litigation, in any court of law.
