### Immunology and Serology

#### THYROID PROFILE, TOTAL, SERUM

Method : ECLIA

Test Name	Result	Flag	Unit	Reference Range	Machine Name
T3, Total	1.60		ng/ml	0.8-2.0	Vitros EI
T4, Total	7.76		µg/dL	5.10-14.10	
TSH (Ultrasensitive)	5.20	H	mIU/mL	0.27-4.2	

#### Interpretation:

- TSH levels are subject to circadian variation, reaching peak levels between 2 - 4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%. Hence time of the day has influence on the measured serum TSH concentrations.
- Alteration in concentration of Thyroid hormone binding protein can profoundly affect Total T3 and/or Total T4 levels especially in pregnancy and in patients on steroid therapy.
- Unbound fraction (Free T4 / Free T3) of thyroid hormone is biologically active form and correlate more closely with clinical status of the patient than total T4/T3 concentration
- Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals.
