Condition of Laboratory Testing & Reporting for Medico-Legal purposes

(1) It is presumed that the test(s) performed are on the specimen(s) /Sample(s) belonging to the patient named or identified and the verification of the particulars have been carried out by the patient or his/her representative at the point of generation of the said specimen(s)/ Sample(s). (2) Laboratory investigations are only tool to facilitate in arriving at diagnosis and should be clinically correlated. (3) Tests results are not valid for medico legal Purposes. (4) Test requested might not be performed due to following Reason: (a) Specimen received is insufficient or inappropriate. (haemolysed/clotted/lipemic etc.) (b) Incorrect specimen type for requested test. (c) Specimen quality is unsatisfactory. (d) There is a discrepancy between the label on the specimen container and the Name on the test requisition form. (5) The Results of the Test May vary from lab and also from time to time for the same patient. (6) The results of a laboratory test are dependent on the quality of the sample as well as the assay technology. (7) In case of queries or unexpected test results please call at +91 9297862282, Email: labasarfi@gmail.com

Immunology and Serology

Prostate Specific Antigen(PSA), Total, Serum
Method: ECLIA

Machine Name: VITROS ECI
ng/ml 0.0-4.0

Prostate Specific Antigen(PSA), Total, Serum 0.40

Border line 4.0 - 10.0

THYROID PROFILE, TOTAL, SERUM

Method: ECLIA

Machine Name: Vitros ECI
ng/ml 0.8-2.0
µg/dL 5.10-14.10
mIU/mL 0.27-4.2

T3, Total 1.31

T4, Total 5.26

TSH (Ultrasensitive) 5.30

Interpretation:

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4.a.m. and at a minimum between 6-10 pm . The variation is of the order of 50% . hence time of the day has influence on the measured serum TSH concentrations.
2. Alteration in concentration of Thyroid hormone binding protein can profoundly affect Total T3 and/or Total T4 levels especially in pregnancy and in patients on steroid therapy.
3. Unbound fraction (Free,T4 /Free,T3) of thyroid hormone is biologically active form and correlate more closely with clinical status of the patient than total T4/T3 concentration
4. Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals.
