Test Name	Result	Flag	Unit	Reference Range
Immunology and Serology				
THYROID PROFILE, TOTAL, SERUM				
Method : ECLIA				
T3, Total	2.33	H	ng/ml	0.8-2.0
T4, Total	9.92		µg/dL	5.10-14.10
TSH (Ultrasensitive)	1.38		mIU/mL	0.27-4.2

Machine Name: Vitros ECI

Interpretation:

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%. Hence time of the day has influence on the measured serum TSH concentrations.
2. Alteration in concentration of Thyroid hormone binding protein can profoundly affect Total T3 and/or Total T4 levels especially in pregnancy and in patients on steroid therapy.
3. Unbound fraction (Free T4 / Free T3) of thyroid hormone is biologically active form and correlate more closely with clinical status of the patient than total T4/T3 concentration
4. Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals.
