EXPECTED VALUES :-

Metabolically healthy patients	=	4.8 - 5.5 % HbA1c
Good Control	=	5.5 - 6.8 % HbA1c
Fair Control	=	6.8 - 8.2 % HbA1c
Poor Control	=	>8.2 % HbA1c

REMARKS:-

In vitro quantitative determination of HbA1c in whole blood is utilized in long term monitoring of glycemia. The HbA1c level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 6-8 weeks) and therefore provides much more reliable information for glycemia
