OPD INITIAL ASSESSMENT FORM

(To be filled by Nursing Staff)

Patient Name: - Honey Bhai UHID Number: - 022-14315

Consultant Name: - Dr. Vivek Chaudhary Date: - 23/3/24 Start Time: - 5:45 Age: - 30 (Years)

Sex: - F (M/F)

Height: - 154 cms, Weight: - 61.6 kgs. Temp. —, Pulse: - 102 (Per minute), SPO2 98%

B.P. :- 120/80 (mm of Hg), RBS:- — First Visit / Follow Up
Visit: First visit

Nursing Staff Name & Signature: - Kavish Patel End Time: - 5:58

Past History: - (TICK MARK)

Diabetes, Hypertension, IHD, COPD, Asthma, TB, Smoker, Alcoholic, Hypothyroidism

Other:-

Family History:-

Psychosocial Assessment:-

Nutritional Screening:-

Immunization Status:-

To be filled by Clinician) Start Time:- _____

Clinical Findings:-

Diagnosis:-

Investigations and Advice:-

Patient Name:	HONEY BAJAJ	Age / Sex:	30YRS/F
Patient ID:	OP-14715	Date:	23/03/2024
Referred By:	HEALTH CHEKUP	USG:	ABD

USG ABDOMEN & PELVIS

LIVER : normal in size shape and normal echotexture.No focal solid or cystic mass seen.
Portal & biliary radicals normal.
PV & CBD normal.

G.B. : well distended & normal. No stone or inflammation seen.

HEAD AND BODY OF PANCREAS : reveals normal echotexture. No mass, calcification or pancreatitis.
Tail of pancreas : Obscure by bowel gas.

SPLEEN : Normal in size, 103 mm & reveals normal echotexture. No other focal mass seen.

BOTH KIDNEY : RK: 97 X 45 mm. , LK : 122 X 64 mm.

? Both Kidneys are joined at their lower poles by soft connecting tissue.

Both kidneys are normal size with normal cortical thickness.

No focal solid or cystic mass seen. No calculus. No hydronephrosis seen.

C.M differentiation is preserved. No parenchymal abnormality seen.

U. BLADDER : minimal distended.

UTERUS: Anteverted. Normal in size.

The endometrial stripe (ET) measures 5.7 mm in diameter and is normal in echogenicity.

BOWEL LOOPS : Peristaltic bowel loops seen in lower abdomen. Bowel loops are normal calibre (Visualized).

No free fluid seen. No enlarged lymphnodes seen.

IMPRESSION:

? Horseshoe kidney.

Rest of abdomen unremarkable.

Suggest clinical correlation and further evaluation for better assessment.

Patient Name:	HONEY BAJAJ	Age /Sex:	30YRS/M
Patient ID:	OP-14715	Date :	23/03/2024
Referred By:	HEALTH CHEKUP	Modality:	X-RAY

X-RAY CHEST PA.

- Both Lung fields appear normal
No evidence of any collapse / consolidation.
- Both Hila appear normal.
No evidence of any enlarged Hilar lymphnodes.
- Both CP angle clear.
- Cardiac size appear normal.
- Both hemi diaphragm appears normal
- Bony cage appear normal.

IMPRESSION:

**No significant abnormality detected. .
Suggest clinical correlation.**

LABORATORY REPORT

Name : Mrs HONEY BAJAJ	Sex/Age : Female / 30 Years	Case ID : 40308001100
Ref. By : Mediwheel Full Body Health Checkup	Dis. At :	Pt. ID :
Bill. Loc. : Health packages		Pt. Loc. :
Reg Date and Time : 23-Mar-2024 09:30	Sample Type : Whole Blood EDTA	Mobile No. :
Sample Date and Time : 23-Mar-2024 09:30	Sample Coll. By : non	Ref Id1 :
Report Date and Time : 23-Mar-2024 12:51	Acc. Remarks :	Ref Id2 :

TEST	RESULTS	UNIT	BIOLOGICAL REF RANGE	REMARKS
Glycated Haemoglobin Estimation				
HbA1C <i>Immuno-turbidimetric</i>	4.9	% of total Hb	<5.7: Normal 5.7-6.4: Prediabetes >=6.5: Diabetes	
Estimated Avg Glucose (3 Mths) <i>Calculated</i>	93.93	mg/dL	Not available	

Please Note change in reference range as per ADA 2021 guidelines.

Interpretation :

HbA1C level reflects the mean glucose concentration over previous 8-12 weeks and provides better indication of long term glycemic control.
Levels of HbA1C may be low as result of shortened RBC life span in case of hemolytic anemia.
Increased HbA1C values may be found in patients with polycythemia or post splenectomy patients.
Patients with Homozygous forms of rare variant Hb(CC,SS,EE,SC) HbA1c can not be quantitated as there is no HbA.
In such circumstances glycemic control can be monitored using plasma glucose levels or serum Fructosamine.
The A1c target should be individualized based on numerous factors, such as age, life expectancy, comorbid conditions, duration of diabetes, risk of hypoglycemia or adverse consequences from hypoglycemia, patient motivation and adherence.

TEST	RESULTS	UNIT	BIOLOGICAL REF RANGE	REMARKS
BIOCHEMICAL INVESTIGATIONS				
Thyroid Function Test				
Triiodothyronine (T3) <small>ECLIA</small>	1.10	ng/mL	0.70 - 2.04	
Thyroxine (T4) <small>ECLIA</small>	8.87	µg/dL	5.5 - 11.0	
TSH <small>ECLIA</small>	2.720	µIU/mL	0.40 - 4.20	

INTERPRETATIONS

Useful for Monitoring patients on thyroid replacement therapy, Confirmation of thyroid-stimulating hormone (TSH) suppression in thyroid cancer patients on thyroxine therapy, for Prediction of thyrotropin-releasing hormone-stimulated TSH response, as An aid in the diagnosis of primary hyperthyroidism, for Differential diagnosis of hypothyroidism. The ability to quantitate circulating levels of thyroid-stimulating hormone (TSH) is important in evaluating thyroid function. It is especially useful in the differential diagnosis of primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low or normal. Concentrations of 5.1 mIU/ml to 7.0 mIU/ml are considered borderline hypothyroid

CAUTIONS

Sick, hospitalized patients may have falsely low or transiently elevated thyroid stimulating hormone. Some patients who have been exposed to animal antigens, either in the environment or as part of treatment or imaging procedure, may have circulating antianimal antibodies present. These antibodies may interfere with the assay reagents to produce unreliable results.

TSH ref range in Pregnancy

	Reference range (microIU/ml)
First trimester	0.24 - 2.00
Second trimester	0.43-2.2
Third trimester	0.8-2.5
