

PATIENT NAME : MRS. KOMAL	DATE : 23/03/2024
REFERRED BY : DR . K.C..KABRA	Sex : F Age: yrs.

=: ABDOMINAL SONOGRAPHY: =

LIVER Is normal in size, shape and echotexture . no focal lesion or IHBR dilatation is seen. Portal vein is normal in diameter. hepatic vein and IVC appear normal.

GALL BLADDER

Is adequately distended with normal wall thickness .
No e/o of any calculus/ sludge or mass lesion is seen.CBD is normal in diameter.

PANCREAS

Normal in echotexture , .MPD appears normal in caliber .
Porto systemic axis appear normal.

SPLEEN

Normal in size & homogenous in echotexture. No focal lesion is seen .
Splenic vein is normal in diameter .

RIGHT KIDNEY : 87x33 MM

Normal in size, shape & echo texture, CMD maintained.
No e/o any calculus or hydronephrosis is seen.

LEFT KIDNEY : 80x46 MM

Normal in size, shape & echo texture, CMD maintained. No e/o any calculus or hydronephrosis is seen.

URINARY BLADDER

Is well distended , wall thickness is normal , No calculus or mass lesion is seen

UTERUS

Is normal in size(80x46x40mm) and echotexture. No focal lesion is seen.
Endometrial thickness is normal(4mm)

22x23mm cyst seen in left ovary .

Right ovary is normal , no adenexal mass is seen .
No free fluid is seen in POD

IMPRESSION:-

- **NO SIGNIFICANT ABNORMALITY DETECTED**

Please correlate clinically.

Test

Result

Units

Biological Reference Interval

HBA1C-GLYCOSYLATED HAEMOGLOBIN

Glycosylated Haemoglobin (HbA1c), HPLC 9 5.14 %
(ARKARY ADAMS Lite 8380)

Average Blood Glucose 100.82 mg/dL

SAMPLE TYPE : WHOLE BLOOD

INTERPRETATION (HbA1C) Glycosilated Haemoglobin:-

- <6.0% Non Diabetic Range
- 6.1-7.0% Diabetic with very good control
- 7.1-8.0% Diabetic with adequate control
- 8.1-9.0% Diabetic with sub optimal control
- 9.1-10.0% Diabetic with poor control

Remarks:-

Glycated haemoglobin (HbA1C) is established indicator of long term blood glucose concentration in patients with diabetes mellitus. Although monitoring of glycated haemoglobin has been proposed as a diagnostics test, it does not have any role in the diagnosis od diabetes mellitus.

Glycated haemoglobin should be monitored every 3 months in all insulin treated patients. More frequent monitoring (every 4 months) is suggested in clinical situation such as diabetes in pregnancy or major change in therapy. The Interpretation of glycated haemoglobin depends on the RBC's having a normal lifespan. The conditions altering RBC's survival may affect HbA1C values must be compared with previous values from same patients.

SAMPLE TYPE : SERUM

Investigations	Result	Unit	Biological Reference Interval
T3	1.28	ng/dl	0.60 - 1.81
T4	8.35	ug/dl	4.50-12.50
SERUM TSH	2.15	mIU/L	0.30-4.50

Performed on automated TOSOH - 360 (ALERE)

NOTE:

Guidelines for interpretation of abnormal thyroid function test

TSH	T4/FT4	T3/FT3	Interpretation
High	Normal	Normal	Mild(subclinical) Hypothyroidism .
High	Low	Low/Normal	Hypothyroidism .
Low	Normal	Normal	Mild(subclinical) Hyperthyroidism
Low	High/Normal	High/Normal	Hyperthyroidism .
Low	Low/Normal	Low/Normal	Rare pituitary(secondary) Hypothyroidism.

Note :

Various medication may affect thyroid gland function test result .

Extreme stress and acute illness may also affect TSH test result .

Result may be low during first trimester of pregnancy .

What are Normal Blood Glucose Levels?

The amount of glucose ("sugar", measured in mg/dL) in your blood changes throughout the day and night.

Your levels will change depending upon when, what and how much you have eaten, and whether or you have exercised.

Normal Blood Sugars

A normal fasting (no food for eight hours) blood sugar level is between 80 and 100 mg/dL

A normal blood sugar level two hours after eating is less than 140 mg/dL

Diabetes is diagnosed by any one of the following:

Any random blood glucose that is greater than 160 mg/dL

An HbA1c test that is equal to or greater than 6.5 percent. HbA1c is an easy blood test that gives a three month average of blood sugars

A two-hour oral glucose tolerance test with any value over 160 mg/dL
