Comments:

Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary. Its response is a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-releasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulates the thyroid gland to synthesize and secrete T3 and T4. Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamic) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

TSH levels During Pregnancy

- First Trimester: 0.1 to 2.5 µIU/mL
- Second Trimester: 0.2 to 3.0 µIU/mL
- Third trimester: 0.3 to 3.0 µIU/mL
