Pap Smear

PAP SMEAR REPORT

Nature of Specimen : Cervical smear

Specimen type : Conventional

Specimen adequacy : Satisfactory for evaluation

Endocervical / Transformation zone cells : Present

General categorization : Within normal limits

DESCRIPTION :

Smear shows predominantly parabasal cells and few intermediate cells in a background of sheets of neutrophils and lymphocytes. Pseudoparakeratotic changes are also seen.

INTERPRETATION : Negative for intraepithelial lesion or malignancy.

Non neoplastic cellular changes : Squamous metaplasia and Atrophic changes present

In accordance with Bethesda system of reporting cervical cytopathology 2016 guidelines
