THYROID PROFILE

Test Name	Patient Value	Reference Range	Unit
T3	1.11	0.58 - 1.59	nmo
T4	7.66	4.87 - 11.92	nmo
TSH	2.45	0.27 - 4.20	uIU/ml

Interpretation(s)

TSH stimulates the production and secretion of the metabolically active thyroid hormones, thyroxine (T4) and triiodothyronine (T3) by interacting with a specific receptor on the thyroid cell surface. The synthesis and secretion of TSH is stimulated by Thyrotropin releasing hormone (TRH), the hypothalamic tripeptide in response to low levels of circulating thyroid hormones. Elevated levels of T3 and T4 suppress the production of TSH a classic negative feedback mechanism. Failure at any level of regulation of the hypothalamic-pituitary-thyroid axis will result in either underproduction (hypothyroidism) or overproduction (hyperthyroidism) of T4 and /or T3.

Clinical Condition T3 Levels T4 Levels TSH level

Primary hypothyroidism Reduced Reduced Increased(Significantly)
Subclinical Hypothyroidism Normal or Low Normal Normal or Low Normal High
Primary hyperthyroidism Increased Increased Reduced(at times undetectable)
Subclinical Hyperthyroidism Normal of High Normal Normal of High Normal Reduced
