FASTING PLASMA GLUCOSE

Specimen: Flouride plasma

Parameter	Result	Unit	Biological Ref. Interval
Fasting Blood Sugar (FBS) <small>HEXOKINASE</small>	89.58	mg/dL	<100 :Non-Diabetic 100-125 :Impaired Fasting Glucose (IFG) >=126 :Diabetic

Criteria for the diagnosis of diabetes :

- HbA1c \geq 6.5 %Or
- Fasting plasma glucose $>$ 126 gm/dL. Fasting is defined as no caloric intake at least for 8 hrs.Or
- Two-hour plasma glucose \geq 200mg/dL during an oral glucose tolerance test by using a glucose load containing the equivalent of 75 gm anhydrous glucose dissolved in water.Or
- In a patient with classic symptoms of hyperglycemia or hyperglycemic crisis, a random plasma glucose \geq 200 mg/dL

*In the absence of unequivocal hyperglycemia, criteria 1-3 should be confirmed by repeat testing.

TEST REPORT

Name	: Diksha Patel	Reg. No	: 403100375
Age/Sex	: 29 Years / Female	Reg. Date	: 09-Mar-2024 01:41 PM
Ref. By	: Dr. PANCHMUKHI HOSPITAL / INSURANCE	Collected On	: 09-Mar-2024 01:42 PM
Client Name	: PANCHMUKHI HOSPITAL	Report Date	: 09-Mar-2024 04:30 PM

HEMOGLOBIN A1 C (HBA1C)

Specimen: Blood EDTA

Parameter	Result	Unit	Biological Ref. Interval
HbA1C <i>Siemens Dimension</i>	5.20	%	Non-Diabetic : Normal : < 5.7 % Pre-Diabetes : 5.7 % - 6.4 % Diabetes : >6.4 % Diabetic : Poor Control : > 7.0 % Good Control : 6.0 % - 7.0 %
Mean Blood Glucose <i>Calculated</i>	102.54	mg/dL	Please correlate with clinical condition 90-115: Normal 115-133: Pre-Diabetic 134-150: Good Control 151-180: Average Control 181-210: Action Suggested >211: Panic Value

Explanation :

- Total hemoglobin A1 c is continuously synthesized in the red blood cell through its 120 days life span. The concentration of HBA1c in the cell reflects the average blood glucose concentration it encounters.
- The level of HBA1c increases proportionately in patients with uncontrolled diabetes. It reflects the average blood glucose concentration over an extended time period and remains unaffected by short-term fluctuations in blood glucose levels.
- The measurement of HbA1c can serve as a convenient test for evaluating the adequacy of diabetic control and in preventing various diabetic complications. Because the average half-life of a red blood cell is sixty days, HbA1c has been accepted as a measurement which reflects the mean daily blood glucose concentration, better than fasting blood glucose determination, and the degree of carbohydrate imbalance over the preceding two months.
- It may also provide a better index of control of the diabetic patient without resorting to glucose loading procedures

HbA1c assay Interferences :

- Presence of Hemoglobin variants and/or conditions that affect red cell turnover must be considered, particularly when the HbA1C result does not correlate with the patient's blood glucose levels.

THYROID FUNCTION TEST

Parameter	Result	Unit	Biological Ref. Interval
Thyroid Stimulating Hormone (TSH) <small>CLIA</small>	5.100	μIU/ml	0.35 - 5.50

Remarks:

- Thyroid-stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-releasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulates the thyroid gland to synthesize and secrete T3 and T4.
- Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism.
- In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

TSH levels During Pregnancy :

- First Trimester : 0.1 to 2.5 μIU/mL
- Second Trimester : 0.2 to 3.0 μIU/mL
- Third trimester : 0.3 to 3.0 μIU/mL
- Reference: Carl A. Burtis, Edward R. Ashwood, David E. Bruns. Tietz Textbook of Clinical Chemistry and Molecular Diagnostics. 5th Edition. Philadelphia: WB Saunders, 2012:2170

Triiodothyronine (T3) <small>CLIA</small>	1.52	ng/mL	0.6 - 1.81
---	------	-------	------------

Clinical Significance:

- Triiodothyronine (T3) is a hormone synthesized and secreted by the thyroid gland in response to the pituitary hormone TSH and is regulated by a negative feedback mechanism involving the thyroid gland, pituitary gland, and hypothalamus.
- In the circulation, 99.7% of T3 is reversibly bound to transport proteins, primarily thyroxine-binding globulin (TBG) and to a lesser extent albumin and prealbumin. The remaining unbound T3 is free in the circulation and is metabolically active.
- In hypothyroidism and hyperthyroidism, FT3 levels parallel changes in total T3 levels. Measuring FT3 is useful in certain conditions such as normal pregnancy and steroid therapy, when altered levels of total T3 occur due to changes in T3 binding proteins, especially TBG.

TEST REPORT

Name	: Diksha Patel	Reg. No	: 403100375
Age/Sex	: 29 Years / Female	Reg. Date	: 09-Mar-2024 01:41 PM
Ref. By	: Dr. PANCHMUKHI HOSPITAL / INSURANCE	Collected On	: 09-Mar-2024 01:42 PM
Client Name	: PANCHMUKHI HOSPITAL	Report Date	: 09-Mar-2024 04:30 PM

Thyroxine (T4) 8.60 µg/dL 4.5 - 12.6
CLIA

Clinical Significance :

- Thyroxin (T4) is a hormone synthesized and secreted by the thyroid gland in response to the pituitary hormone TSH and is regulated by a negative feedback mechanism involving the thyroid gland, pituitary gland, and hypothalamus. In the circulation, 99.95% of T4 is reversibly bound to transport proteins, primarily thyroxine-binding globulin (TBG) and to a lesser extent albumin and thyroxine-binding prealbumin. The remaining unbound T4 is free in the circulation and is both metabolically active and a precursor to T3.
- In hypothyroidism and hyperthyroidism, FT4 levels parallel changes in total T4 levels. Measuring FT4 is useful in certain conditions such as normal pregnancy and steroid therapy, when altered levels of total T4 occur due to changes in T4 binding proteins, especially TBG.

Limitations:

- The anticonvulsant drug phenytoin may interfere with total and FT4 levels due to competition for TBG binding sites.
- FT4 values may be decreased in patients taking carbamazepine.
- Thyroid autoantibodies in human serum may interfere and cause falsely elevated FT4 results.

CYTOPATHOLOGY REPORT

Specimen :

Liquid Based Cervical Cytology Material.

Grossing Description :

C4H00021/24

Microscopic Description :**Specimen Adequacy :** Satisfactory for evaluation.**Endocervical cells (Transformation Zone Component) :** Seen.**Partially obscuring component like inflammation :** Seen.**General Categorization :** Negative for Intraepithelial Lesion and Malignancy.**Squamous Cell Abnormalities :**

Squamous cell : Normal superficial & Intermediate squamous cells are seen.

Few glandular normal endocervical cells present.

No evidence of malignancy in studied smear.

Non Neoplastic cellular variation like :

Squamous metaplasia : Not seen.

Keratotic changes : Not seen.

Tubal metaplasia : Not seen.

ECHOCARDIOGRAPHY & COLOR DOPPLER

Patient Name : Diksha Patel
Ref.By : Dr Dadhaniya Sir

Age/Sex : 29/F
Date : 9/3/24

SUMMARY OF 2D ECHO

LA, LV size Normal
No LVH
No RWMA at rest
Overall LVEF -60 %.

RA , RV size and function Normal
All valves appear Normal in structure

No E/O Vegetation / clot /Pericardial effusion
IAS / IVS intact

No shunt across great vessels

IVC Size Normal 12 mm and collapsing > 50% on deep inspiration

Colour Doppler

Mitral Valve: E/A ratio 1.0 , TDI s/o E*>A*
No MR

Tricuspid Valve: Trivial TR CW TR jet 25 mmHg
Estimated PASP 30 mm Hg

Aortic Valve: No AR
No significant LVOT gradient - AV PG Max 13 mm Hg

Pulmonary Valve : No PR , PV Max PG 6 mm Hg

FINAL IMPRESSION

Good LV systolic function at rest

PATIENT NAME : DIKSHA PATEL

DATE: 09 March 2024

USG ABDOMEN AND PELVIS

- **LIVER:** is normal in size and shows normal parenchymal echotexture. No focal or diffuse lesions are seen. The intra hepatic biliary and portal radicles are normal. The portal vein and CBD are normal.
- **GALL BLADDER:** Well distended and appears unremarkable. No evidence of calculus or cholecystitis is seen. Gall bladder wall thickness appears normal.
- **PANCREAS:** appears normal in size and echotexture. No focal lesion seen. No evidence of peripancreatic inflammatory changes.
- **SPLEEN:** is normal in size and echotexture. No evidence of focal or diffuse lesion seen.
- **BOTH KIDNEYS:** are normal in size and echotexture. Cortical echogenicity appears normal. Cortico medullary differentiation is preserved. No evidence of hydronephrosis on either side. **concretions are seen at lower pole calyx of right kidney and upper pole calyx of left kidney.**
- **URINARY BLADDER:** well distended. No evidence of calculus, wall thickening, diverticula or mass lesion.
- **UTERUS:** is normal in size, shape and position. Endometrial thickness measures 4.0 mm. Endometrial & myometrial echotexture is normal. No focal lesion is seen
- **BOTH OVARIES** are normal in size & echotexture. No focal solid or cystic lesions are seen. No adnexal mass is seen
- No free fluid is seen in the POD. Visualized bowel loops appears unremarkable, No evidence of necrotic lymphadenopathy is seen. RIF/ LIF clear. Bilateral C-P angel clear.

CONCLUSION:

- No significant abnormality seen in present study.

Thanks for reference.

Pt.'s Name: DIKSHA PATEL

Date: 9 March, 2024

Radiograph of chest (PA view)

- Both the lung fields are clear.
- No e/o consolidation, cavitations or collapse.
- Both the hila appears normal
- Both costophrenic angles appear clear.
- Both domes of diaphragm appear normal.
- Cardiac size is within normal limit.
- Bones underview reveals no evident abnormality.

Thanks for reference.
