BIOCHEMISTRY

Test Name (Methodology)	Result	Flag	Units	Biological Reference Interval
"MediWheel Full Body Health Checkup (Below 40"				
T3 - Total (Tri Iodothyronine) (ECLIA)	128.00		ng/dL	80.00 - 200.00
T4 - Total (Thyroxine - Total) (ECLIA)	7.08		µg/dL	5.1-14.1
TSH, Thyroid Stimulating Hormone (ECLIA)	1.80		µIU/mL	Women (Non pregnant):0.27-4.2 Pregnant women 1st trimester: 0.1-2.5 2nd trimester: 0.2-3.0 3rd trimester: 0.3-3.0

Test Observations:

The following potential sources of variation should be considered while interpreting thyroid hormone results:

1. Circadian variation in TSH secretion: peak levels are seen between 2-4 am. Minimum levels seen between 6-10 am. This variation may be as much as 50% thus, influence of sampling time needs to be considered for clinical interpretation.
 2. Total T3 and T4 levels are seen to have physiological rise during pregnancy and in patients on steroid treatment
 3. Circulating forms of T3 and T4 are mostly reversibly bound with Thyroxine binding globulins (TBG), and to a lesser extent with albumin and Thyroid binding Pre-Albumin. Thus the conditions in which TBG and protein levels alter such as chronic liver disorders, pregnancy, excess of estrogens, androgens, anabolic steroids and glucocorticoids may cause misleading total T3, total T4 and TSH interpretations.
 4. T4 may be normal in the presence of hyperthyroidism under the following conditions : T3 thyrotoxicosis, Hypoproteinemia related reduced binding, in presence of drugs (eg Phenytoin, Salicylates etc)
 5. Neonates and infants have higher levels of T4 due to increased concentration of TBG
 6. TSH levels may be normal in central hypothyroidism, recent rapid correction of hypothyroidism or hyperthyroidism, pregnancy, phenytoin therapy etc.
 7. TSH values of <0.03 uIU/mL must be clinically correlated to evaluate the presence of a rare TSH variant in certain individuals which is undetected by conventional methods.
 8. Presence of Autoimmune disorders may lead to spurious results of thyroid hormones
 9. Various drugs can lead to interference in test results
- It is recommended to evaluate unbound fractions, that is free T3 (fT3) and free T4 (fT4) for clinic-pathologic correlation, as these are the metabolically active forms.

Triglycerides (Enzymatic colorimetry)	105		mg/dL	Normal: <150 Borderline-high: 150-199 High risk 200-499 Very high risk >500
Cholesterol Total - Serum (Enzymatic colorimetric)	141		mg/dL	<200 No risk 200-239 Moderate risk >240 High risk
Cholesterol - LDL				
Cholesterol - LDL (Direct) (Enzymatic colorimetric)	75		mg/dL	Optimum:<100 Above optimum:<130; Moderate risk:130-159; High risk:>160

ULTRASOUND UPPER ABDOMEN & PELVIS

Liver:-

Liver is normal in size, outline and echotexture. A small calcific focus is seen in segment V of right lobe liver. Intra hepatic biliary radicals are not dilated. CBD is not dilated. Portal vein is normal.

Gall bladder:-

It is seen in distended state. Wall thickness is normal. Few (atleast 3 in number) echogenic foci with posterior acoustic shadow suggestive of calculi measuring approx. 15.0mm, 15.0mm, and 13.0mm are seen in gall bladder lumen.

Pancreas:-

Only head & body seen and is normal in size, shape & echotexture. Rest obscured by gas shadowing.

Spleen:-

Spleen is normal in size, & outline. Parenchymal echotexture is normal. A splenuncule is seen at upper pole.

Right kidney:-

Right kidney is normal in size. It is normal in outline and echotexture. Corticomedullary differentiation is maintained. No backpressure changes or echogenic focus is seen.

Left kidney:-

Left kidney is normal in size. It is normal in outline and echotexture. Corticomedullary differentiation is maintained. No backpressure changes or echogenic focus is seen.

Uri. Bladder:-

It is seen in distended state with echofree lumen. Wall thickness is normal.

Uterus :-

is normal in size, shape & echotexture. Endometrial thickness measures approx 11.0mm.
