Thyroid Stimulating Hormone (Ultra). Method : Enhanced Chemiluminescence	: 2.814	uIU/mL	0.58-6.88

1.The TSH levels are subject io diurnal/circadian variation. reaching to peak leve between 2 to 4 am. and at a minimum between 6 to10 pm. The variation is to the order of 50%, hence the time when sample is collected has influence on the levels of TSH 2.Many substances produced in central nervous system, even in healthy euthyroid individuals, may enhance or suppress TSH production in addition to the feedback effect of thyroid hormone . 3.Furthermore, although TSH levels rise and fall in response to changes in the concentration of Free T4, individuals appear to have their own setpoints and factors such as race and age also contribute to variability in TSH levels Alterations of normal pituitary response are also common in patients with a variety of illnesses which can affect the levels of TSH. 4.Interassay variations are possible on different Immunoassay platforms.

TSH - For pregnancy the referance range is as follows -  
 1st -trimester : 0.6 - 3.4 uIU/mL  
 2nd trimester : 0.37 - 3.6 uIU/mL  
 3rd trimester : 0.38 - 4.04 uIU/mL

ESR At 1 Hour : 16 mm/hr 0 - 20

Method : Modified Westergren Method

**INTERPRETATION :**

ESR is a screening test to detect presence of systemic disease; however a normal result does not rule out a systemic disease.

ESR is also used to monitor course of disease or response to therapy if initially elevated.
