

## BANK OF BARODA MEDICAL EXAMINATION REPORT

Client name :- Sudipta Chatterjee  
 Ref. No. :- .....  
 Date of birth :- 15.05.1990 Sex :-  Male /  Female  
 Identification mark on the body :- Nothing as such found  
 Photo ID Xerox :- DL No. WB 4720170001350.  
 Date & place of medical examination :- 10.09.21, Asansol  
 Request for medical exam. of **BANK OF BARODA** through Medi Assist Health Care India (Pvt.) Ltd.

- A) 1. Height :- 159 cm.      2. Weight :- 75 kgs.  
 3. Chest Inspiration :- 106 cm.      4. Chest Expiration :- 101 cm.  
 5. Abdomen Girth :- 98 cm.  
 6. Blood Pressure :- I) 120/72 mm. of Hg. II) ..... mm. of Hg.  
 7. Pulse Rate :- 68 / minute.      Character of pulse : Regular
- B) 1. Are you now in good health ? Yes  
 2. Are you currently taking any medicine ? No  
 3.) Are you married ? Yes  
 4. Have you ever had a positive test for HIV / AIDS / Malignancy ? No  
 5. Have you ever suffering from sexually transmitted disease or Hepatitis B or C ?  
     ..... No  
 6. Have you any congenital disorders ? ..... No  
 7. Have you any respiratory disorders ? ..... No  
 8. Have you any musculo skeletal disorders ? ..... No  
 9. Have you CVS disorders ? ..... No  
 10. Have you GI system disorders ? ..... No  
 11. Have you urinary system disorders ? ..... No  
 12. Have you reproductive system disorders ? ..... No

| Tri-Iodothyronine Total (TT3)                       | 1.20    | ng/mL  | 0.8-2.0         |
| Thyroxine - Total (TT4)                             | 9.24    | µg/dL  | 4.82-15.65      |
| Thyroid Stimulating Hormone-3rd Generation TSH      | 3.01    | µIU/mL | 0.38-5.33       |

|  |             |
|--|-------------|
| General Population (males and non-pregnant females.) | 0.38 - 5.33 |
| Pregnant Females, 1st Trimester                      | 0.05 - 3.70 |
| Pregnant Females, 2nd Trimester                      | 0.31 - 4.35 |
| Pregnant Females, 3rd Trimester                      | 0.41 - 5.18 |

TSH levels are subject to circadian variation, reaching peak levels between 2am-4am and at a minimum between 6-10pm. The variation is of the order 50%. Hence time of the day has influence on the measured serum TSH concentration.

TSH is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 ( Free T3) and FT4 ( Free T4). Additionally, the hypothalamic tripeptide, thyrotropin - releasing hormone (TSH), directly stimulates TSH production. The ability of quantitate circulating levels of TSH is important in evaluating thyroid function. It is especially useful in the differential diagnosis of primary ( thyroid) from secondary ( pituitary) and tertiary (hypothalamic) hypothyroidism . In primary hypothyroidism , TSH levels are significantly elevated , while in secondary and tertiary hypothyroidism , TSH levels are low. TSH stimulation differentiates secondary and tertiary hypothyroidism by observing the change in patient TSH levels. Typically , the TSH response to TSH stimulation is absent in cases of secondary hypothyroidism and normal to exaggerated in tertiary hypothyroidism. Historically ,TSH stimulation has been used to confirm primary hypothyroidism, indicated by elevated T3 and T4 levels and low or undetectable TSH levels . TSH assays with increased sensitivity and specificity provide a primary diagnostic tool to differentiate hyperthyroid from euthyroid patients.

Kindly correlate clinically. If necessary discuss/repeat.This is an electronically authenticated report
