### Blood Group & RH Factor

SPECIMEN	WHOLE BLOOD
ABO GROUP	B
RH FACTOR	POSITIVE
INTERPRETATION	

The ABO system consists of A, B, AB, and O blood types. People with type AB blood are called "universal recipients" because they can receive any of the ABO types. Group O blood is called "universal donors" because their blood can be given to people with any of the ABO types. Mismatches with the ABO and Rh factor can be very dangerous. The most serious, sometimes fatal, reactions occur with these mismatches. But these types of reactions can be prevented.

### Rh system

The Rh system classifies blood as Rh-positive or Rh-negative based on the presence or absence of Rh and proteins. A person with Rh-positive blood can receive Rh-positive or Rh-negative people with Rh-negative blood will have a Rh factor with their blood. They receive Rh-positive blood. In a situation where there is a mismatch, Rh blood types can be serious.

### THYROID FUNCTION TEST

<b>Tri Iodo Thyronine (T3 Total), Serum</b>	1.03	g/dL	0.8 - 1.8
---	------	------	-----------

**Clinical significance:**  
 Normal range of triiodothyronine (T3) is 0.8-1.8 g/dL. T3 is a thyroid hormone that is produced by the thyroid gland. It is responsible for the regulation of the body's metabolism. An elevated level of T3 may indicate hyperthyroidism, while a low level may indicate hypothyroidism.

<b>Thyroxine (T4) Serum</b>	10.71	ng/dL	7 - 15
-----------------------------	-------	-------	--------

**Clinical significance:**  
 The normal range of thyroxine (T4) is 7-15 ng/dL. T4 is a thyroid hormone that is produced by the thyroid gland. It is responsible for the regulation of the body's metabolism. An elevated level of T4 may indicate hyperthyroidism, while a low level may indicate hypothyroidism.

<b>Thyroid Stimulating Hormone (TSH), Serum</b>	0.456	uIU/mL	0.1 - 4.0
---	-------	--------	-----------

**Clinical significance:**  
 The normal range of thyroid stimulating hormone (TSH) is 0.1-4.0 uIU/mL. TSH is a hormone that is produced by the pituitary gland. It is responsible for the regulation of the thyroid gland. An elevated level of TSH may indicate hypothyroidism, while a low level may indicate hyperthyroidism.

City		Mumbai

Parameter	Result	Unit	Biological Reference
-----------	--------	------	----------------------

Prostate Specific Antigen, Total, Serum	0.557	ng/ml	0-4.5
---	-------	-------	-------

**Clinical significance:**

Prostate specific antigen (PSA) is a protein produced by the prostate gland. It is used as a marker for prostate cancer. PSA levels are measured in the blood. A PSA level of 0-4.5 ng/ml is considered normal. A PSA level of 4.5-10 ng/ml is considered suspicious for prostate cancer. A PSA level of 10-20 ng/ml is considered indicative of prostate cancer. A PSA level of 20-50 ng/ml is considered indicative of advanced prostate cancer. A PSA level of 50 ng/ml or higher is considered indicative of metastatic prostate cancer.

### Glycosylated Hemoglobin [GHb/HbA1c]

Test Name	Result	Unit	Biological Reference Interval
GHbA1c (Glycosylated Hemoglobin)	5.00	%	5.7 - 6.4
Fasting Blood Glucose	94.6	mg/dl	70 - 100

#### CLINICAL SIGNIFICANCE

Glycosylated Hemoglobin (GHb) is a composite of hemoglobin (Hb) and glucose. Levels of GHb are determined by the average blood glucose levels over the preceding 8-12 weeks. Normal range of glycosylated hemoglobin is approximately 5.7-6.4%. Values above 6.5% indicate diabetes mellitus. Values between 5.7% and 6.4% indicate prediabetes. Values below 5.7% indicate normal blood glucose control. GHb is not affected by acute changes in blood glucose levels. GHb is a useful test for monitoring long-term blood glucose control in patients with diabetes mellitus.

#### Please correlate with clinical condition

Test Name	Result	Unit	Biological Reference Interval
Fasting Blood Glucose	94.6	mg/dl	70 - 100

Note: All test results are subject to pre-analytical, analytical and post-analytical errors. The physician should be consulted for interpretation.
