# MER-MEDICAL EXAMINATION REPORT

DATE OF EXAMINATION	23/12/23
NAME	ASHISH AGARWAL
AGE	33Y/M
HEIGHT	5.11FT
WEIGHT	81KG
BP	121/79
ECG	NORMAL
X-RAY	NORMAL
PRESENT AILMENTS	NO
DETAILES OF PAST AIMENTS (IF AY)	NO
COMMENTS/ADVICE :SHE/HE IS	YES

Signature With Stamp Of Medical Examiner

# ipra Scans & Labs

e	: Ashish agarwal	Age	:	33yrs. / M
ks To	: Mediwheel	Date	:	23/12/2023

### X-RAY CHEST (PA VIEW)

Both lung fields appear normal.

No e/o Koch's lesion or consolidation seen.

Both CP angles appear clear.

Both domes of diaphragm appear normal.

Heart size and aorta are within normal limits.

Bony thorax under vision appears normal.

Both hila appear normal.

## ULTRASOUND STUDY OF WHOLE ABDOMEN

LIVER Liver is mild enlarged in size (16.9cm) & bright in echotexture. No focal mass lesion is seen. Liver is intra departic biliary radicles are normal. Portal vein is normal in caliber.

### GALL BLADDER

GALL BLOCK Well distended. The wall thickness appears normal. No evidence of calculus or Gall bladder is well C B.D. appears normal. mass lesion is seen. C.B.D. appears normal.

### PANCREAS

Pancreas is normal in size, shape & echotexture. No focal mass lesion is seen.

#### SPLEEN

Spleen is normal in size, shape & echotexture. No focal mass lesion is seen.

### BOTH KIDNEYS

Both kidneys are normal in size, shape & echotexture. Renal parenchyma appears normal. No evidence of hydronephrosis or cortical scarring is seen in both kidneys. There are few calculi seen in middle and lower calyx of both kidneys, average sizes measures 4-5 mm.

Right kidney measures	1	12.0 x 5.4 cms.
Left kidney measures		11.7 x 5.0 cms.

#### URINARY BLADDER

Urinary bladder is well distended and appears normal in contour. The wall thickness appears normal.

#### PROSTATE

Prostate is normal in size, shape and echotexture

No obvious abdominal lymphadenopathy is seen. No free fluid is seen in peritoneal cavity.

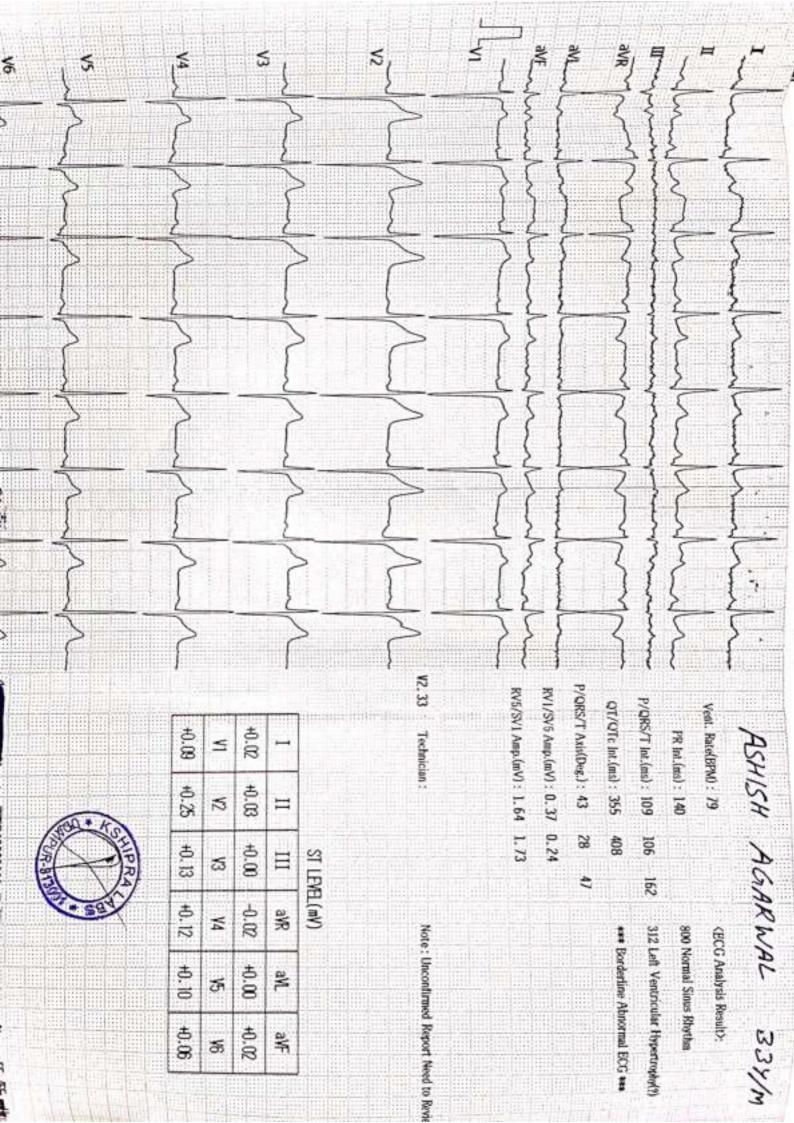

#### OPINION:

- Mild hepatomegaly with fatty changes grade I.
- Bilateral multiple renal calculi.

BUT } Dr. Bharat Jain MD (Radio-Diagnosis) **Consultant Radiologist** 

N.B.: This is only a professional opinion and not the final diagnosis. MRI/CT is subject to variations due to technical limitations, hence correlation with clinical findings and other investigations should be carried out to know the true nature of Illness

LDL Cholesterol level is primary goal for treatment and varies with risk category and assessment

For LDL Cholesterol level Please consider direct LDL value •

Risk assessment from HDL and Triglyceride has been revised. Also LDL goals have changed.

Detail test interpreation available from the lab

All tests are done according to NCEP guidelines and with FDA approved kits. •

 LDL Cholesterol level is primary goal for treatment and varies with risk category and assessment
 # For test performed on specimens received or collected from non-KSHIPRA locations, it is presumed that the specimen belongs to the patient named or identified as labeled on the container/test request and such verification has been carried out at the point generation of the said specimen by the sender.

KSHIPRA will be responsible Only for the analytical part of test carried out. All other responsibility will be of referring Laboratory. . All other responsibility will be of referring Laboratory.

			A1 C ESTIMATION	N
Hb A1C Boronate Af	finity with Fluorescent Quenching	5.6	% of Total Hb	Poor Control : > 7.0 % Good Control : 6.2-7.0 % Non-diabetic Level : 4.3-6.2 %

mg/dL

#### Degree of Glucose Control Normal Range:

Poor Control >7.0% \*

Mean Blood Glucose

Calculated

Good Control 6.0 - 7.0 %\*\*Non-diabetic level < 6.0 %

\* High risk of developing long term complication such as retinopathy, nephropathy, neuropathy, cardiopathy,etc.

\* Some danger of hypoglycemic reaction in Type I diabetics.

\* Some glucose intolerant individuals and "subclinical" diabetics may demonstrate HbA1c levels in this area.

122.06

#### **EXPLANATION :-**

\*Total haemoglobin A1 c is continuously symthesised in the red blood cell throught its 120 days life span. The concentration of HBA1c in the cell reflects the average blood glucose concentration it encounters.

\*The level of HBA1c increases proportionately in patients with uncontrolled diabetes. It reflects the average blood glucose oncentration over an extended time period and remains unaffected by short-term fluctuations in blood glucose levels. \*The measurement of HbA1c can serve as a convenient test for evaluating the adequacy of diabetic control and in preventing various diabetic complications. Because the average half life of a red blood cell is sixty days,HbA1c has been accepted as a measurnment which eflects the mean daily blood glucose concentration, better than fasting blood glucose determination, and the degree of carbohydrate imbalance over the preceding two months.

\*It may also provide a better index of control of the diabetic patient without resorting to glucose loading procedures.

#### HbA1c assay Interferences:

\*Errneous values might be obtained from samples with abnormally elevated quantities of other Haemoglobins as a result of either their simultaneous elution with HbA1c(HbF) or differences in their glycation from that of HbA(HbS)

SUMMARY The hypophyseal release of TSH (thyrotropic hormone) is the central regulating mechanism for the biological action of thyroid hormones.TSH is a very sensitive and specific parameter for assessing thyroid function and is particularly suitable for early detection or exclusion of disorders in the central regulating circuit between the hypothalamus, pituitary and thyroid. LIMITATION Presence of autoantibodies may cause unexpected high value of TSH
