POSITIVE

NOTE :

- * Apart from major A,B,H antigens which are used for ABO grouping and Rh typing, many minor blood group antigens exist. Agglutination may also vary according to titre of antigen and antibody.
- * So before transfusion, reconfirmation of blood group as well as cross-matching is needed.
- * Presence of maternal antibodies in newborns, may interfere with blood grouping.
- * Auto agglutination (due to cold antibody, falciparum malaria, sepsis, internal malignancy etc.) may also cause erroneous result.
