### X-RAY CHEST PA VIEW

### OBSERVATIONS:

The lungs on the either side show equal translucency.

The peripheral pulmonary vasculature is normal.

No focal lung lesion is seen.

Bilateral CP angles are normal.

Both hila are normal in size, have equal density and bear normal relationship.

The heart and trachea are central in position and no mediastinal abnormality is visible.

The cardiac size is normal.

The domes of the diaphragms are normal in position, and show smooth outline.

IMPRESSION :- No significant abnormality detected.

ADVICE:- Clinical correlation and follow up.

Dr. AVINASH RATHOD DMRD, DNB

CONSULTANT RADIOLOGIST

MMC-2011/05/1616

#### **UREA CREAT RATIO (UCR)**

Test		<u>Result</u>	<u>Unit</u>	Biological Ref. Range
Blood Urea	:	30.10	mg/dl	10-50 mg/dl
Method: Urease UV/GLDH				
Blood Urea Nitrogen	:	14.07	mg/dl	6-21 mg/dl
S. Creatinine Method: Modified Jaffe's	:	0.85	mg/dl	0.7-1.3 mg/dl

UREA / CREATININE RATIO : 35.41 8.56 to 50.10

#### **INTERPRETATION:**

The principle behind this ratio is the fact that both urea (BUN) and creatinine are freely filtered by the glomerulus; however, urea reabsorbed by the tubules can be regulated (increased or decreased) whereas creatinine reabsorption remains the same (minimal reabsorption).

- > 50.10 (Pre renal causes): BUN reabsorption is increased. Urea is disproportionately elevated relative to creatinine in serum. This may be indicative of hypoperfusion of the kidneys due to <a href="heart failure">heart failure</a> or <a href="heart failure">dehydration</a>. <a href="heart Gastrointestinal bleeding">Gastrointestinal bleeding</a> or increased dietary protein can also increase the ratio.
- **8.56 50.10 (Post Renal causes or Normal)**: Normal range. Can also be postrenal disease. BUN reabsorption is within normal limits.
- < 8.56 (Intra Renal): Renal damage causes reduced reabsorption of BUN, therefore lowering the Urea:Cr ratio. Decreased ratio indicates <u>liver disease</u> (due to decreased <u>urea</u> formation) or <u>malnutrition</u>.
