Test Description	Value(s)	Unit(s)	Reference Range
<b>ESR ( 1 hr )</b>			
<b>ESR ( Erythrocyte Sedimentation Rate )</b>	15	mm/hr	< 20
<b>(EDTA Whole Blood) [ Capillary Photometry ]</b>			

**Interpretation:**

High ESR is not diagnostics of any disease but just indicative of some inflammatory process. ESR is to be used to monitor outcome of therapy. Microcytic anemia can increase ESR. High ESR can also be seen in apparently healthy adults.

**Interpretation :**

**Reference:**

1. Tietz Textbook of Clinical Chemistry and Molecular Diagnostics, edited by Carl A Burtis, Edward R. Ashwood, David E Bruns, 4th Edition, Elsevier publication, 2006, 563, 1314-1315.

2. Wallach's Interpretation of Diagnostic tests, 9th Edition, Ed Mary A Williamson and L Michael Snyder. Pub Lippincott Williams and Wilkins, 2011, 234-235.

THYROID PANEL, SERUM Triiodothyronine T3, is a thyroid hormone. It affects almost every physiological process in the body, including growth, development, metabolism, body temperature, and heart rate. Production of T3 and its prohormone thyroxine (T4) is activated by thyroid-stimulating hormone (TSH), which is released from the pituitary gland. Elevated concentrations of T3, and T4 in the blood inhibit the production of TSH.

Thyroxine T4, Thyroxine's principal function is to stimulate the metabolism of all cells and tissues in the body. Excessive secretion of thyroxine in the body is hyperthyroidism, and deficient secretion is called hypothyroidism. Most of the thyroid hormone in blood is bound to transport proteins. Only a very small fraction of the circulating hormone is free and biologically active.

In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

Below mentioned are the guidelines for Pregnancy related reference ranges for Total T4, TSH & Total T3

Levels in	TOTAL T4	TSH3G	TOTAL T3
Pregnancy	(µg/dL)	(µIU/mL)	(ng/dL)
First Trimester	6.6 - 12.4	0.1 - 2.5	81 - 190
2nd Trimester	6.6 - 15.5	0.2 - 3.0	100 - 260
3rd Trimester	6.6 - 15.5	0.3 - 3.0	100 - 260

Below mentioned are the guidelines for age related reference ranges for T3 and T4.

T3	T4
(ng/dL)	(µg/dL)
New Born: 75 - 260	1-3 day: 8.2 - 19.9
	. 1 Week: 6.0 - 15.9

**NOTE:** TSH concentrations in apparently normal euthyroid subjects are known to be highly skewed, with a strong tailed distribution towards higher TSH values. This is well documented in the pediatric population including the infant age group.

Kindly note: Method specific reference ranges are appearing on the report under biological reference range

**Reporting Time :** Oct 10, 2022, 05:01 p.m.

**Sample ID :**

222121502

Test Description	Value(s)	Unit(s)	Reference Range
<b>HbA1C</b>			
<b>HbA1c (GLYCOSYLATED HEMOGLOBIN), BLOOD [ (HPLC, NGSP certified) ]</b>	5.0	%	Non-diabetic: < 5.7 Pre-diabetics: 5.7 - 6.4 Diabetics: > or = 6.5 ADA Target: 7.0 Action suggested: > 8.0
MEAN PLASMA GLUCOSE [ HB VARIANT (HPLC) ]	97.0		< 116.0

**Note:**

1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled .
2. Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate.

**Comments**

HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations.

**ADA criteria for correlation between HbA1c & Mean plasma glucose levels.**

HbA1c(%)	Mean Plasma Glucose (mg/dL)
6	126
7	154
8	183
9	212
10	240
11	269
12	298

**Interpretation**

As per American Diabetes Association (ADA)	
Reference Group	HbA1c in %
Non diabetic adults >=18 years	<5.7
At risk (Prediabetes)	5.7 - 6.4
Diagnosing Diabetes	>= 6.5

## ULTRASONOGRAPHY OF WHOLE ABDOMEN

### **LIVER:**

It is normal in size (14.24 cm) with normal in shape, outline and **increased echotexture**. Portal vein at porta measures 10.6 mm.

### **GALL BLADDER:**

It is normally distended. Its wall thickness is within normal limits. No obvious intraluminal calculus or mass is seen.

### **BILIARY TREE:**

IHBR- not dilated. The common bile duct at porta hepatis measures 2.8 mm. Visualized lumen appears clear.

### **PANCREAS:**

It is normal in shape, size, outline and echotexture. MPD is not dilated. No focal lesion seen. No peripancreatic fluid collection.

### **SPLEEN:**

It is normal in size with normal in shape, outline and echotexture. Spleno-portal axis is patent and normal in dimensions. Splenic span is 10.50 cm. No focal lesion seen.

### **KIDNEYS:**

Right kidney measures 10.31x3.41 cm. Left kidney measures 9.38x4.06 cm.

Both kidneys are normal in shape, size, position and echotexture. The cortico-medullary differentiation is intact. The cortical thickness is within normal limits. There is no hydronephrosis/calculus seen.

### **URINARY BLADDER:**

It is normal in capacity and contour. The bladder wall is normal. There is no obvious intravesical calculus or mass.

### **UTERUS:**

It is anteverted, anteflexed and measures 10.59x4.18x6.01 cm. **Well-circumscribed, round, smoothly marginated, calcified hypoechoic lesion of size 3.35x3.19 cm is seen in posterior myometrium.** The endometrium is in midline and measures 4.7 mm. The cervix appears normal.

### **ADNEXA:**

Both ovaries are normal in shape, size and echotexture. No focal lesion seen.

### **PERITONEUM:**

There is no free or loculated fluid in peritoneal cavity.

### **RETROPERITONEUM:**

There is no detectable lymphadenopathy. Aorta and IVC appear normal.

## **IMPRESSION:**

1. Grade II fatty infiltration of liver.
2. Intramural fibroid in posterior myometrium.
