MAMMOGRAPHY

(Craniocaudal and mediolateral oblique views were taken for bilateral breasts with optimal compression technique)

Bilateral breasts show heterogenously dense fibroglandular tissue obscuring the underlying parenchyma(ACR TYPE C).

No definite space occupying lesion is noted in either breast.

No microcalcification is seen in either breast.

No architectural distortion is noted.

Nipples are normal in position and no nipple retraction is noted.

No definite skin thickening is noted on either side.

IMPRESSION : No definite space occupying lesion is noted in either breast. In view of dense fibroglandular tissue, correlation with sonomammogram can be done in case of obscured lesions.

To be correlate clinically.
